Future of Australian Dairy

An initiative of **Australian Dairy Farmers, Dairy Australia, and National Herd Improvement Association of Australia**, DataGene was formed to further improve accuracy of Australian breeding values and expand opportunities by creating new data sources to improve productivity.

- Allowing seamless access to data from multiple sources;
- Providing a 'home' for industry data, analysis and benchmarking;
- Supporting the development of modern, user-friendly tools for farmers;
- Providing a critical mass of data, which will improve the integrity of genetic evaluation system;
- Opening opportunities for new breeding values such as health breeding values; and
- Broadening the use of data beyond traditional herd improvement to aid dairy businesses and the industry.

Future of Australian Dairy

2x
genetic gain (cows)
through genomic selection of dairy cattle

3x
genetic gain (ryegrass) through genomic
selection of ryegrass pastures
