

# Water deprivation time for livestock exported by air to support compliance with ASEL 3.0

Live Animal Exports Division

## 1 Purpose

- 1.1 This policy is a guide for exporters to manage and record water deprivation time throughout an export journey in compliance with the Australian Standards for the Export of Livestock (ASEL) 3.0.

## 2 Scope

- 2.1 This policy applies to exporters sending any livestock consignments by air. It outlines the requirements exporters must meet in order to comply with ASEL s6.1.9 in relation to water deprivation time.
- 2.2 This policy should be read in conjunction with relevant export legislation and standards listed under [related material](#).

## 3 Requirements

- 3.1 As defined in ASEL, water deprivation time means a continuous period that livestock do not have access to water. Water deprivation time begins at the time animals are curfewed prior to transport to the airport. Calculations must include the time until the point animals are provided water again.
- 3.2 The maximum water deprivation time specified for each species and class of animal is equal to those set out in the Australian Animal Welfare Standards and Guidelines – Land Transport of Livestock.
- 3.3 In accordance with ASEL s6.1.9, water deprivation time must be managed for all consignments of livestock exported by air. Exporters must hold records of expected and actual water deprivation times for each consignment.

## 4 Instructions

- 4.1 For all livestock consignments exported by air, an exporter must:
- Keep records of a water deprivation plan that includes information required by ASEL and as outlined in this policy.
  - Ensure the water deprivation plan includes the consignment's expected total water deprivation time at the time the notice of intention to export (NOI) is submitted to the department.

- Ensure the water deprivation plan includes the consignment's actual total water deprivation time at the completion of the journey.
- Provide an end-of-journey (EOJ) report to the department, in accordance with ASEL s6.11.2 and department reporting requirements.

An example is available at [Appendix A](#).

4.2 The department may request the consignment's water deprivation plan from an exporter:

- prior to approval of an NOI, if the delegate requires it to be satisfied that the transport arrangements for the livestock are adequate for their health and welfare
- prior to issuance of an export permit, if the regional veterinary officer requires it to be satisfied that the livestock have been, and will continue to be, exported in compliance with ASEL
- at the time of audit, to ensure the exporter holds the information required for each consignment and has complied with the relevant water deprivation standards within ASEL
- when investigating notifiable mortality incidents or concerns about the health or welfare of livestock previously exported.

## Appendix A: Water deprivation plan template

The information in this template is required to be held by an exporter for each livestock consignment exported by air, in accordance with ASEL s6.1.9. The information must be provided to the department when requested. The template is an example only and another format may be used, however exporters must provide all required information at the level of detail outlined in this template. Exporters can use this template or an alternative format.

### Template for capturing water deprivation details

LNC number \_\_\_\_\_

Departure airport \_\_\_\_\_

Destination country \_\_\_\_\_

### Contact details of person(s) nominated by the exporter to provide water to livestock during transit or unplanned stops

Given name (s) \_\_\_\_\_ Family name \_\_\_\_\_
