Legislation

New prices for regulatory charges have been calculated using methodology prescribed in legislation:

- Biosecurity Regulation 2016 - Chapter 9, Part 2, Division 1, Section 107A Indexation of fees.
- Biosecurity Charges Imposition (Customs) Regulation 2016, and Biosecurity Charges Imposition (General) Regulation 2016 - Part 2, Section 9A Indexation of Charges.
- Imported Food Control Regulations 2019 - Part 4, Section 30A Indexation of charges.
- Imported Food Charges (Imposition – Customs) Regulation 2015 and the Imported Food Charges (Imposition - General) Regulation 2015 - Part 2, Section 6A – Indexation of charges.

Price calculation methodology

Indexation provisions in legislation provide the methodology for determining if indexation will increase the dollar amounts imposed for specified fees or charges. This is a 2-step process, where the indexation factor is calculated and if greater than 1, is used to calculate the indexed fee or charge.

Step 1 Calculate the ‘indexation factor’ for 1 July 2024

The indexation factor for 1 July 2024 is calculated using the [All-Groups Consumer Price Index \(CPI\) number](#) for the 2023 December quarter and the CPI for the 2022 December quarter.

The formula is:

$$\text{CPI for the 2023 December quarter (reference quarter)} \div \text{CPI for the 2022 December quarter (base quarter)} = \text{Indexation factor (136.1} \div \text{130.8} = \text{1.041)}$$

Based on this formula, the indexation factor for July 2024 is 1.041.

Step 2 Calculate the ‘indexed amount’ for the fee or charge in question

Because the indexation factor for 1 July 2024 is greater than 1, fees and charges covered by an indexation provision will be indexed using:

$$\text{the dollar amount of the relevant fee or charge immediately before 1 July 2024} \times \text{the indexation factor for 1 July 2024 (1.041).}$$

The indexed amount of the fee or charge is to the nearest whole dollar.

Example price calculations for fees and charges subject to indexation

Scenarios 1, 2 and 3 set out examples of how new prices are calculated where a dollar value is prescribed in legislation.

Scenario 1 Price calculation of full Import declaration charge for air cargo

Price calculation	Price
Pre-indexed price for full import declaration charge for air cargo	\$43
Indexation factor	1.041
Calculation of new price	\$43 x 1.041
Price after indexation	\$44.76
New price (rounded to the nearest whole dollar)	\$45

Scenario 2 Price calculation of a category 3 permit assessment fee

Price calculation	Price
Pre-indexed price for category 3 permit assessment fee	\$296
Indexation factor	1.041
Calculation of new price	$\$296 \times 1.041$
Price after indexation	\$308.13
New price (rounded to the nearest whole dollar)	\$308

Scenario 3 Price calculation of application charge to enter into an approved arrangement

Price calculation	Price
Pre-indexed price for an approved arrangement application charge	\$194
Indexation factor	1.041
Calculation of new price	$\$194 \times 1.041$
Price after indexation	\$201.95
New price (rounded to the nearest whole dollar)	\$202

Example calculation of prices where no dollar value is prescribed

Where a provision in legislation does not specify a dollar value, and the amount payable is set by reference to a percentage the new price is calculated by working out the indexed price for the full amount and then applying the prescribed percentage. An example is provided in Scenario 4.

Scenario 4 Part year charge for a single approved arrangement

The annual charge that applies to enter into a single approved arrangement, where it has been applied for prior to 1 January in a financial year (full year) is currently \$2,680.

If a person applies to enter into an arrangement after 1 January in a financial year (part year), the current charge is 50% of the full year charge, which is \$1,340.

The indexed rate for the annual charge for a full year is calculated as follows:

- Pre-indexed price multiplied by the indexation factor = $\$2,680 \times 1.041$
- Price after indexation = \$2,789.88
- New price rounded to the nearest whole dollar = \$2,790
- The new price to enter into a single approved arrangement for a part year is 50% of the annual charge for a full year = \$1,395.

Where a provision in legislation does not specify a dollar value, and the amount payable is set by reference to 'twice the amount' for a quarter hour increment, the new price is calculated by working out the indexed price for the quarter hour and then multiplying it by 2 an example is provided in Scenario 5.

Scenario 5 Non-continuous inspection on a weekday outside ordinary hours of duty

Where the department performs an inspection on a weekday outside ordinary hours of duty for each person carrying out the inspection the current rates that apply are:

- If the inspection is carried out immediately before or immediately after an in-office activity during ordinary hours of duty — \$55 for each quarter hour or part of a quarter hour.

- If the inspection is not carried out immediately before or immediately after an in-office activity during ordinary hours of duty, a minimum fee for 30 minutes applies, which is set at an amount that is 'twice the dollar amount' specified for each quarter hour or part of a quarter hour.

The indexed rate for the minimum 30 minutes where the activity is not continuous is calculated as follows:

- New price for each quarter hour or part of a quarter hour = $\$55 \times 1.041$
- New price for the quarter hour = $\$57.26$
- New price rounded to the nearest whole dollar = $\$57$

When an inspection is not carried out immediately before or immediately after an in-office activity during ordinary hours of duty the rate that applies is for a minimum of 30 minutes.

- The rate that applies for the 30-minute period is 'twice the amount' specified for each quarter hour.
- The new price for this 30-minute period = $2 \times \$57 = \114 .
