

Product Stewardship Televisions and Computers

ANNUAL REPORT 2019 – 2020

EPSA IS A COMPANY OF:

SIMS
LIFECYCLE
SERVICES

OVERVIEW

Electronic Product Stewardship Australasia (EPSA) and Sims Lifecycle Services are part of Sims Limited, one of the largest trading scrap metals companies in the world.

Electronic Product Stewardship Australasia (EPSA) is an approved Co-Regulatory Arrangement and wholly owned by Sims E-Recycling Pty Ltd, trading as Sims Lifecycle Services (SLS). EPSA was created in 2013 in response to the Australian Government's National Television and Computer Recycling Scheme.

First and foremost, safety and wellbeing of everyone on our site from employees to visitors and contractors is our number one priority. Sustainability is at the core of who we are and what we do. We aim to be the world's safest and most responsible recycling company by striving to create a zero harm workplace for our employees, being an exemplary member of the communities in which we operate, and being responsible stewards of the environment. We believe excellence in Safety, Health, Environment, Community and Sustainability (SHECS) practices is vital to the well-being of our people and essential to all aspects of our global business. By doing these things well, we will earn the respect and trust of our stakeholders and create sustained growth and profitability in an increasingly resource-constrained world.

As consumers continue to "digitize" their lives, they are purchasing and discarding larger volumes of electronics. This results in a growing waste stream of broken, obsolete and unwanted electronic equipment, more commonly referred to as WEEE or e-waste. Discarded e-waste can be challenging to recycle because electronic products are complex devices manufactured from varying proportions of glass, metals and plastics.

SLS has been at the forefront of transforming the electronics recycling industry into a growing success story. We have led the industry in building a recycling infrastructure to support a sustainable ecosystem of product use, planned end-of-life disposal, and a systematic recycling process that extracts maximum value from discarded equipment, while creating green jobs. Consumers can recycle computers, peripherals and televisions at an EPSA collection point and be assured devices will be recycled safely, efficiently and to the highest environmental standards.

Our members are extremely important to the scheme and form an integral part of the process in meeting the outcomes without which the scheme would cease to exist. I would therefore like to take the opportunity to thank our valued members again for their continued support during FY20.

EPSA's strategic partner is SLS and through SLS's fully compliant processes, we delivered on all performance targets of the scheme for FY20. In addition to this, we delivered a cost effective outcome yet again to our valued members.

There is no doubt that FY20 has been a challenging year for all especially with the Covid-19 pandemic taking effect in the second half of the year. The impact on collection services, businesses and processes has been clear for all to see.

Looking ahead to FY21, Covid-19 will continue to play its part and at the time of writing, the impacts on collection services, particularly in Melbourne as a result of the necessary lock-downs has been real. With the closure and/or restricted access to collection points currently in play, volume will be difficult to source during FY21.

EPSA remains confident and determined to deliver fully compliant and cost effective outcomes for its members during FY21 and beyond and look forward to the challenges ahead.

Stay safe.
