

Look out for hitchhiker pests

In goods or sea containers being
exported to Australia

Australian Government
Department of Agriculture,
Fisheries and Forestry

Hitchhiker pests can harm Australia's agricultural industries, environment and way of life.

If you export goods and/or sea containers to Australia, keep an eye out for pests and other biosecurity risks.

Hitchhiker pests can hide in many places, including sea containers, goods, machinery, packaging and timber pallets.

Help us keep these pests out of Australia.

If you find any type of pest while preparing your goods and/or sea container for export to Australia, take appropriate action to remove, treat and clean the container and/or goods.

Make sure to check Australia's biosecurity import conditions before sending or shipping items to Australia by visiting BICON:
