Handbook
for

Hospitals

March 2000

The Hospitals NPI Handbook consists of the manuals below which have been developed in consultation with key industry stakeholders and the NPI Guide.

- Fossil Fuel Electric Power Generation;
- Fuel and Organic Liquid Storage;
- Combustion Engines;
- Combustion in Boilers;
- Sewage Sludge and Biomedical Waste Incineration; and
- Fugitive Emissions.

NPI Handbooks are designed to help facilities that trigger an NPI reporting threshold to estimate their emissions. Facilities do not need to report to the NPI until a handbook is approved and published for their sector. The ANZSIC Code for this handbook is 861 which currently includes the following four digit codes:

8611 – Hospitals (except psychiatric hospitals)

8612 – Psychiatric hospitals

8613 – Nursing homes

The appropriate four digit ANZSIC code is part of NPI reporting requirements.
