

Inspection Types Decision Tree

The following documentation is to assist in answering the below question in the Biosecurity Portal:

Inspection / consignment Information

This information may be available on the packing slip, the direction (which can be accessed via the Biosecurity Portal home page under "View import directions" or on the import permit). Completing this information helps the department allocate the right biosecurity officer and time for your booking.

?

Does this inspection request need a Photo-Ionisation Detector (PID), e.g. inspection of cut flowers from Ecuador, Columbia or Kenya? If yes, make sure that you add "Photo-Ionisation Detector (PID) Inspection".

X

Start typing your inspection / consignment information to find suggested matches (e.g. citrus, bulk commodity, machinery etc.). You can add multiple items as required. *

NOTE: FCC’s will automatically populate this field with the correct inspection type.
