Results for defining the sub-regions		
1	Statistical Local Areas and sub-regions by total persons counted, Northern Planning Area, 2001	6
2	Sub-regions defined by Collection Districts with corresponding Indigenous Locations and Localities, 2001	52
Demographic tables		
3	Estimated Resident Population (ERP) of Statistical Local Areas in the Northern Planning Area, 1998, 2002 and 2003	58
4	Population by sub-region, Northern Planning Area, 2001	59
5	Number of persons by address 1 year and 5 years before 2001 Census by sub-region, Northern Planning Area, 2001	60
6	Persons by address 1 year and 5 years before 2001 Census by sub-region, Northern Planning Area, 2001 (percentage of total sub-region population)	61
7	Population by sex by sub-region, Northern Planning Area, 2001	62
8	Population by sex by sub-region, Northern Planning Area, 2001 (percentage of the total sub-region population)	63
9	Population by sex by sub-region, Northern Planning Area, 2001 (percentage of total Northern Planning Area population)	64
10	Population by age group by sex, Northern Planning Area, 2001	65
11	Population by age group by sex, Northern Planning Area, 2001 (percentage of sex)	65
12	Population by age group by sex, Northern Planning Area, 2001 (percentage of age group)	65
13	Dependent age groups by sub-region, Northern Planning Area, 2001	66
14	Dependent age groups by sub-region, Northern Planning Area, 2001 (percentage of total sub-region population)	67
15	Dependent age groups by sub-region, Northern Planning Area, 2001 (percentage of total Northern Planning Area age group population)	68
16	Labour force age groups by sub-region, Northern Planning Area, 2001	69
17	Labour force age groups by sub-region, Northern Planning Area, 2001 (percentage of total sub-region population)	70
18	Labour force age groups by sub-region, Northern Planning Area, 2001 (percentage of total Northern Planning Area age group population)	71
19	Dependent age groups by sex by sub-region, Northern Planning Area, 2001	72
20	Dependent age groups by sex by sub-region, Northern Planning Area, 2001 (percentage of total sub-region population)	73
21	Labour force age group by sex by sub-region, Northern Planning Area, 2001 (number, and percentage of total sub-region population)	74
22	Deaths registered in Queensland and the Northern Territory where place of usual residence of deceased was in the Northern Planning Area, 2000, 2001 and 2002	75
23	Causes of death, Northern Planning Area, 2000 to 2002	75
Cultural tables		
24	Indigenous status of total population by sub-region, Northern Planning Area, 2001	76
25	Indigenous population by sex by sub-region, Northern Planning Area, 2001	77

26	Indigenous population by sex by sub-region, Northern Planning Area, 2001 (percentage of total Indigenous sub-region population)	78
27	Indigenous origin of Indigenous persons by sub-region, Northern Planning Area, 2001	79
28	Indigenous origin of Indigenous persons by sub-region, Northern Planning Area, 2001 (percentage of total Indigenous sub-region population)	80

Social tables

29	Number of families by family type, Northern Planning Area, 2001 (occupied private dwellings)	81
30	Families by family type, Northern Planning Area, 2001 (occupied private dwellings) (percentage of total)	81
31	Number of persons by family type, Northern Planning Area, 2001 (occupied private dwellings, excludes family members temporarily absent on Census night)	81
32	Persons by family type, Northern Planning Area, 2001 (occupied private dwellings, excludes family members temporarily absent on Census night) (percentage of total)	81
33	Number of persons in specific household types, Northern Planning Area, 2001 (all persons in occupied private dwellings)	82
34	Persons in specific household types, Northern Planning Area, 2001 (all persons in occupied private dwellings) (percentage of total)	82
35	Relationship in household, Northern Planning Area, 2001 (persons in occupied private dwellings)	82
36	Number of families in specific family types by sub-region, Northern Planning Area, 2001 (occupied private dwellings)	83
37	Families in specific family types by sub-region, Northern Planning Area, 2001 (occupied private dwellings) (percentage of total sub-region families)	84
38	Families in specific family types by sub-region, Northern Planning Area, 2001 (occupied private dwellings) (percentage of total Northern Planning Area families)	85
39	Number of persons in specific household types by sub-region, Northern Planning Area 2001 (all persons in occupied private dwellings)	86
40	Persons in specific household types by sub-region, Northern Planning Area, 2001 (all persons in occupied private dwellings) (percentage of total sub-region population)	87
41	Persons in specific household types by sub-region, Northern Planning Area 2001 (all persons in occupied private dwellings) (percentage of total Northern Planning Area population)	88
42	Number of dwellings by dwelling structure and tenure type, Northern Planning Area, 2001 (all private dwellings)	89
43	Dwellings by dwelling structure and tenure type, Northern Planning Area, 2001 (all private dwellings) (percentage of dwelling structure)	89
44	Dwellings by dwelling structure and tenure type, Northern Planning Area, 2001 (all private dwellings) (percentage of tenure type)	90
45	Dwelling structure by number of persons, Northern Planning Area, 2001 (all occupied private dwellings)	90
46	Number of dwellings by dwelling structure by sub-region, Northern Planning Area, 2001 (all private dwellings)	91
47	Dwellings by dwelling structure by sub-region, Northern Planning Area, 2001 (all private dwellings) (percentage of total sub-region private dwellings)	92
48	Dwellings by dwelling structure by sub-region, Northern Planning Area, 2001 (all private dwellings) (percentage of total Northern Planning Area dwellings)	93

49	Number of dwellings by tenure type by sub-region, Northern Planning Area, 2001 (all private dwellings)	94
50	Dwellings by tenure type by sub-region, Northern Planning Area, 2001 (all private dwellings) (percentage of total sub-region private dwellings)	95
51	Dwellings by tenure type by sub-region, Northern Planning Area, 2001 (all private dwellings) (percentage of total Northern Planning Area private dwellings)	96
52	Highest level of schooling completed, Northern Planning Area, 2001 (persons aged 15 years and over)	97
53	Type of educational institution attending, Northern Planning Area, 2001 (all persons)	97
54	Highest level of schooling completed by sub-region, Northern Planning Area, 2001 (persons aged 15 years and over)	98
55	Highest level of schooling completed by sub-region, Northern Planning Area, 2001 (persons aged 15 years and over) (percentage of total sub-region)	99
56	Highest level of schooling completed by sub-region, Northern Planning Area, 2001 (persons aged 15 years and over) (percentage of total Northern Planning Area)	100
57	Age group by computer use Northern Planning Area, 2001	101
58	Age group by computer use Northern Planning Area, 2001 (percentage of age group)	101
59	Age group by computer use Northern Planning Area, 2001 (percentage of computer use)	101
60	Internet use by sex Northern Planning Area, 2001	102
61	Internet use by sex Northern Planning Area, 2001 (percentage of place of use)	102
62	Internet use by sex Northern Planning Area, 2001 (percentage of sex)	102
63	Used a computer at home, used the internet at home and/or at work and/or elsewhere in the week prior to the Census, Northern Planning Area, 2001	103

Economic tables

64	Labour force status by age group, Northern Planning Area, 2001 (all persons aged 15 years and over)	104
65	Labour force status by age group, Northern Planning Area, 2001 (all persons aged 15 years and over) (percentage of age group)	104
66	Labour force status by age group, Northern Planning Area, 2001 (all persons aged 15 years and over) (percentage of labour force status)	104
67	Persons by labour force status by sub-region, Northern Planning Area, 2001 (all persons aged 15 years and over)	105
68	Persons by labour force status by sub-region, Northern Planning Area, 2001 (all persons aged 15 years and over) (percentage of total sub-region labour force status)	106
69	Persons by labour force status by sub-region, Northern Planning Area, 2001 (all persons aged 15 years and over) (percentage of total Northern Planning Area labour force status)	107
70	Industry of employment by sex, Northern Planning Area, 2001 (all employed persons aged 15 years and over)	108
71	Industry of employment by sex, Northern Planning Area, 2001 (all employed persons aged 15 years and over) (percentage of sex)	108
72	Persons by industry of employment by sub-region, Northern Planning Area, 2001 (all employed persons aged 15 years and over)	109
73	Persons by industry of employment by sub-region, Northern Planning Area, 2001 (all employed persons aged 15 years and over) (percentage of total sub-region)	111

74	Persons by industry of employment by sub-region, Northern Planning Area, 2001 (all employed persons aged 15 years and over) (percentage of total Northern Planning Area)	113
75	Annual individual income, Northern Planning Area, 2001 (persons aged 15 years and over)	115
76	Annual individual income, Northern Planning Area, 2001 (persons aged 15 years and over) (percentage of total)	115
77	Annual household income, Northern Planning Area, 2001 (occupied private dwellings, persons aged 15 years and over)	115
78	Annual household income, Northern Planning Area, 2001 (occupied private dwellings, persons aged 15 years and over) (percentage of total)	115
79	Annual individual income by sub-region, Northern Planning Area, 2001 (persons aged 15 years and over)	116
80	Annual individual income by sub-region, Northern Planning Area, 2001 (persons aged 15 years and over) (percentage of total sub-region)	117
81	Annual individual income by sub-region, Northern Planning Area, 2001 (persons aged 15 years and over) (percentage of total Northern Planning Area)	118
82	Annual household income by sub-region, Northern Planning Area, 2001 (households; income of persons aged 15 years and over)	119
83	Annual household income by sub-region, Northern Planning Area, 2001 (households; income of persons aged 15 years and over) (percentage of total sub-region)	120
84	Annual household income by sub-region, Northern Planning Area, 2001 (households; income of persons aged 15 years and over) (percentage of total Northern Planning Area)	121

List of figures

1	Statistical Local Areas in the Northern Planning Area, ASGC 2001	7
2	Sub-regions by Collection District (Northern Territory component) of Northern Planning Area, ASGC 2001	8
3	Sub-regions by Collection District (Queensland component) of Northern Planning Area, ASGC 2001	9
4	Total number of persons counted by Collection District, Northern Planning Area, 2001	15
5, 6	Age group by sex, Northern Planning Area, 2001 (total number of persons; percentage of sex – percentage in each age group)	16
7, 8, 9	Age groups by Indigenous status by sex (a), Northern Planning Area, 2001 (Indigenous population; non-Indigenous population, total population)	21
10	Total number of Indigenous persons by Indigenous status, by Collection District, Northern Planning Area, 2001	22
11	Persons speaking Australian Indigenous languages as the main language spoken at home by Collection District, Northern Planning Area, 2001	23
12	Computer and internet usage by Collection District, Northern Planning Area, 2001	31
13, 14, 15	Industry of employment by sex and by state/territory, Northern Planning Area, 2001 (total number of employed persons by sex by industry; percentage of all employed persons by sex by industry; percentage of all employed persons by state/territory by industry)	37
16	Persons in the labour force by Collection District, Northern Planning Area, 2001	38
17	Persons not in the labour force by Collection District, Northern Planning Area, 2001	39

Summary

The Office of Economic and Statistical Research (OESR) undertook a socio-economic review of the National Oceans Office Northern Planning Area in June 2004. The purpose of the review was to provide the National Oceans Office with an analysis of the results from the Australian Bureau of Statistics (ABS) 2001 Census of Population and Housing for the Northern Planning Area, and for specific communities in the area. The analysis was based on sub-regions, to reflect the number and variety of the different communities in the Northern Planning Area.

At the time of the 2001 Census, the total number of persons counted in the Northern Planning area was 49 387 persons (of which 14.8% were visitors). The estimated resident population increased from 1998 to 2003, with an average annual growth of 1.9%. Based on population projections (in 1999), the Northern Planning Area is expected to grow to 55 535 residents by the year 2019.

The age structure of the population in the Northern Planning Area has some distinctive features. In contrast with the relatively high proportion (30%) of the population that is aged between 0 and 14 years, the per cent of the population aged 15 to 24 years is noticeably lower, probably due to movement away from the region for education and work. The proportion of the population aged 25 to 39 years is then higher, reflecting the return of residents as they mature, visitors and/or immigration of new residents into the region. The proportion of the population in each of the age classes over 39 years then decreases steadily with increasing age.

A very distinctive and important feature of the Northern Planning Area is that nearly 60% of the population is Indigenous. Of the total area population, nearly 32% stated that an Australian Indigenous language is their main language spoken at home. The Indigenous population of the Northern Planning Area has a younger age structure than the non-Indigenous population. The level of education of Indigenous persons in terms of the years of schooling completed is very low compared with the non-Indigenous population. The Community Development Employment Program (CDEP) is the largest source of employment for Indigenous persons.

The average household size for occupied private dwellings in the Northern Planning Area is 3.8 persons. Over 90% of all persons living in an occupied private dwelling are a member of a family household. Most people live in a separate house; however, nearly 17% of all dwellings are some form of a caravan, cabin, houseboat, improvised home, tent, or sleep-out; or a house/flat attached to an office or shop. Most private dwellings are rented rather than owned or being purchased.

Of the total persons aged 15 years and over in the Northern Planning Area, nearly 54% have completed up to year 10 or below, and another 29.1% have completed year 11 or 12. Just over 14% of the population used a computer at home in the week prior to the Census, and 14.4% stated that they used the internet at home and/or at work and/or elsewhere.

The Northern Planning Area is comprised of distinct communities. Planning in the region will need to consider both the differences and similarities between these communities.

The Northern Planning Area communities (sub-regions) can be categorised into four types, based on the major industry of employment. The four types are mining industry communities, agricultural industry communities, government administration and defence industry communities, and communities where no single industry is dominant. In communities where employment is dominated by either the mining industry or the agricultural industry, the industry appears to determine the demographic and social characteristics of these sub-regions.

The most prominent features of the mining industry communities include the population's higher educational levels compared with other communities, the greater usage of computers and the internet, low unemployment rates and high labour force participation rates.

The features of the agricultural industry communities are high mobility (with fluctuations in the actual number of persons located in a sub-region); low educational levels coupled with relatively minor usage of computers and the internet; and higher proportions of individuals with lower income levels. However, household types varied from sub-region to sub-region, with the proportion of the population living in a family household ranging from 43.7% to 93.5%.

The third type of community in the Northern Planning Area is populated mainly by Indigenous people, who are employed mainly in government administration and defence, mostly in the Community Development Employment Program, which is aimed at employment of Indigenous persons. This means that the demographic and social attributes of Indigenous communities determine their economic base (rather than the other way around, as in the mining and agricultural communities). The Indigenous communities are diverse across the sub-regions, and also differ between the Northern Territory and Queensland components of the Northern Planning Area. The Indigenous sub-regions were placed into three sub-groups based on geographical location, Indigenous status and proportion of Indigenous persons.

The fourth type of community in the Northern Planning Area is employed across all industry sectors, and is in either rural or coastal areas. The rural sub-regions mostly cover large geographic areas, while the coastal sub-regions are smaller townships located in or near a coastal area.

Just over half of the Northern Planning Area population was classified as being in the labour force (employed or actively looking for work), of which 94.9% were employed. The industry employing the greatest number of people was the government administration and defence industry, followed by the mining industry. At the time of the 2001 Census, 52.1% of persons aged 15 years and over had an annual individual income below \$15 599.

Introduction

Australia's Oceans Policy was launched in December 1998 to ensure that both current practices and proposed future actions are consistent with ecologically sustainable development. The policy recognises the need to maintain the health of the oceans' ecosystems. It also recognises that strong, diverse and internationally competitive marine industries, which are important to national and regional economies, are based on long-term ecological sustainability.

In December 1999, the National Oceans Office was formed as an executive agency under the *Commonwealth Public Service Act 1999*. The National Oceans Office is responsible for the implementation and further development of Australia's Oceans Policy. To assist the National Oceans Office in these tasks, the Queensland Office of Economic and Statistical Research (OESR) was contracted to produce a socio-economic profile of coastal and ocean-dependent communities in the Northern Planning Area, at a finer geographic scale than is currently available.

The Northern Planning Area covers waters from the Arafura Sea, through the Gulf of Carpentaria to the Torres Strait. The Northern Planning Area incorporates twelve Statistical Local Areas (SLAs), some of which are also a Shire (S)¹. The twelve SLAs are Aurukun (S), Burke (S), Carpentaria (S), Cook (S) – excluding Weipa, Cook (S) – Weipa only, East Arnhem Balance, Groote Eylandt, Gulf, Mornington (S), Nhulunbuy, Torres (S) and West Arnhem. The SLAs are defined by the Australian Bureau of Statistics (ABS.)

This report covers the demographic, social and economic conditions in the SLAs of the Northern Planning Area, including data on age, cultural background, religion, family, dwellings and tenure, income, education and labour force status. Data and analysis has also been provided for sub-regions in the SLAs of the Northern Planning Area. Sub-regions were defined, for the purposes of this report, by either an individual Collection District (CD) or by the aggregation of CDs. Each sub-region represents a distinct community.

The majority of data are sourced from the Australian Bureau of Statistics' Censuses of Population and Housing in 1991, 1996 and 2001.

In addition to a summary, an introduction, and a description of the analytical methods, the report is divided into four sections: the demographics of the Northern Planning Area, the cultural characteristics of the area, other social characteristics, and economic characteristics. The detailed method and data tables are contained in appendices. A glossary is included at the end of the report, which includes an explanation of ABS terms.

¹ In this report, Shires are indicated as (S).

Method

Most of the raw data used in the analysis for this report was sourced from the Australian Bureau of Statistics (ABS). The ABS has defined areas at various geographical scales, in the Australian Standard Geographical Classification (ASGC), for the purpose of collecting data. Because the boundaries of the National Oceans Office Northern Planning Area do not equate precisely to the boundaries of the ASGC areas, data from specific geographic levels of the ASGC were aggregated to 'best fit' into the actual boundary of the Northern Planning Area.

The smallest geographic area in the ASGC is the Collection District (CD), which is generally the smallest unit used for collecting and producing data in the four-yearly national Census of Population and Housing. CDs are aggregated to form the larger census areas, such as the Statistical Local Area (SLA).

The first ASGC level used to source ABS data was the Statistical Local Area. A total of 12 SLAs were located either fully or partly in the Northern Planning Area. Seven of these SLAs were located in the Queensland component of the Northern Planning Area and five were in the Northern Territory component of the Northern Planning Area (Figure 1).

Data at the SLA geographic level, however, did not reflect the distinctiveness of the demographic, social and economic characteristics of the many individual communities located in the Northern Planning Area. To reflect this distinctiveness, the Collection District (CD), was used as a basic building block to define sub-regions, each sub-region representing a community.

In total, 160 CDs are located within the boundaries of the 12 SLAs in the Northern Planning Area. Of these, 90 CDs are in the Queensland component and 70 CDs are in the Northern Territory component. Due to the large number of CDs, and because some CDs were too small to be used individually, relevant CDs and their corresponding data were aggregated to create sub-regions. In total, 71 sub-regions (or communities) were defined, 39 in the Queensland component and 32 in the Northern Territory component. The sub-regions are shown in Table 1.

Another type of ASGC area used to define sub-regions in this study was the Indigenous Location (ILOC), which is a single CD, or an aggregate of CDs, with an Indigenous population of at least 80 persons. The other ASGC area used was the Urban Centres/Localities (UC/L), where a Locality (L) is a population cluster of between 200 and 999 people. People living in Localities are classified as rural, or non-urban. There are no Urban Centres (population clusters of 1000 or more people) in the Northern Planning Area.

Several methods were used to choose which CDs to aggregate to define the sub-regions. As the sub-regions were based on distinct communities, the first method was to review other ASGC boundaries, such as Indigenous Locations and Urban Centres/Localities. The CDs within the ILOC boundaries were collated to define one or more sub-regions, based on Indigenous communities. A CD within a Locality boundary was used to define a community based on a rural population cluster. The total population counted in each CD was then recorded by SLA, CD, ILOC and Locality (see Table 2, in the Appendix).

Based on local knowledge of the area, CDs were then aggregated (where necessary) into logical sub-regions, and given a sub-region name reflecting both the SLA and the smaller community (see Table 1). Refer to Figures 1, 2 and 3 for maps of the SLAs and sub-regions. Figure 3 shows the CDs comprising each sub-region.

Table 2 shows how, for instance, in the Arukun SLA, two sub-regions were defined: Arukun – Town and Arukun – Rural. Each of these sub-regions comprises only one CD. The Arukun – Town sub-region is also a Locality (Arunkun) within the Arunkun ILOC. In the Burke SLA, four CDs are collated to form the Burke – Rural sub-region, another CD is defined as the Burke – Doomadgee sub-region, and the other CD is defined as the sub-region Burke – Burketown (comprising the Locality of Burke Town). Each of the CDs forming the Burke – Rural sub-region is also part of an ILOC. The ILOC named ‘Carpentaria remainder’ in the Burke – Rural sub-region also spans parts of two other sub-regions: Carpentaria North West – Rural and Carpentaria South – Rural.

Table 2 also shows how some sub-regions cross SLA boundaries. For instance, CD number 3010606, which is in the SLA Cook (S) – excl. Weipa, was placed in the Carpentaria North West – Rural sub-region, along with two CDs from the Carpentaria SLA.

Several software programs were used to initially allocate the CDs to regions, to access the 2001 Census data at the CD level, to access other data, to analyse all of the data and to report on the findings.

The mapping and Census program ‘CData 2001’ (which includes ‘Map-Info’) provided the main source of Census data for the CD level data, and was also used to create all boundary and thematic maps. Data at the CD level were then exported into a Microsoft Excel pre-formatted table, which contained the 160 CDs comprising the sub-regions. The data were then analysed in Excel and formatted in Microsoft Word. Other data were sourced from Office of Economic and Statistical Research (OESR) databases (mostly based on other levels of ABS data).

In addition to providing a statistical profile of the population of the Northern Planning Area as a whole, this report also provides statistical profiles for the populations of each sub-region. The data analysed include age, cultural background, family, dwelling and tenure, income, education, and labour force status.

Note that, in this report, the totals of the Northern Planning Area tables, based on data collected at the SLA level, may differ from the totals of the sub-region tables, based on data collected at the CD level. These differences are the result of ABS procedures, rather than errors in any of the totals shown. The ABS has separately aggregated and randomised data at each geographical level, to avoid the release of data that could identify individuals. As a result, the adjusted figures for each geographical level are close to the true figures but do not add up exactly when the data are aggregated.

The main sources of data used in this report were the ABS Censuses of Population and Housing for 1991, 1996 and 2001. Other data used, relating to demographic and Indigenous characteristics, were all sourced from the ABS.

Most Census data used in this report relate to the population enumerated on Census night. This is based on where a person is physically located on Census night, regardless of whether that location is their usual place of residence. Generally, enumerated population data were used for both the statistical analysis and the final report, mainly because this was the only data available at the CD level. Where this is the case, it is noted on the tables.

Table 1 Statistical Local Areas and sub-regions by total persons counted, Northern Planning Area, 2001

Statistical Local Areas Qld	Total persons (a)	Statistical Local Areas NT	Total persons (a)
Aurukun (S)	1032	East Arnhem - Balance	6906
Cook (S) (excl. Weipa)	7739	Groote Eylandt	2426
Cook (S) - Weipa only	1961	Gulf	3482
Torres (S)	9698	Nhulunbuy	3804

1 The demographics of the Northern Planning Area population

Most of the raw data used in this section were sourced from the Basic Community Profile Tables of the 2001 Census of Population and Housing, which are based on the place of enumeration of a person at the time of the Census.

Northern Planning Area population

At the time of the 2001 Census, 49 387 persons were counted as being in the Northern Planning Area. Of these persons, 85.2% stated that they were counted at home², 13.9% were visitors from within Australia, and 0.9% were overseas visitors. Unless otherwise stated, overseas visitors are henceforth excluded from the analysis and the data tables.

Of the total persons not counted at home (6852 persons), yet counted in the Northern Planning Area on the night of the 2001 Census, 12.1% usually resided in the same SLA³ in the Northern Planning Area, 38.3% usually resided in other SLAs of Queensland, and 10.1% usually resided in other SLAs of the Northern Territory. Of the remaining Australian visitors counted in the Northern Planning Area, 16.8% usually resided in New South Wales, 14.4% in Victoria and 8.1% in the remaining states and territory of Australia.

A higher proportion (92.2%) of the population was counted at home in the Northern Territory component of the Northern Planning Area than in the Queensland component (80.0%). Hence, there was a higher proportion of visitors in the Queensland component of the area on the night of the 2001 Census.

In 2001, a total of 44 940 persons stated that they usually resided in the Northern Planning Area. Of these persons, 55.0% usually resided in the Queensland component, with the highest number in the Torres sub-regions (9346 persons or 37.8% of this Queensland component). In the Northern Territory component, the highest number lived in the East Arnhem sub-regions (6834 persons or 33.8%).

The estimated resident population data are calculated on an annual basis, representing the population estimated to be residing in an area as at 30 June. From 1998 to 2003 the number of persons increased by 3656, an estimated average annual growth of 1.9% (Table 3).

In 1999, the Australian Bureau of Statistics estimated that the Northern Planning Area resident population would increase from 44 778 persons in 1999 to 55 535 persons by the year 2019, surpassing 50 000 persons by the year 2009.⁴

² Although this figure represents the total number of persons who stated that they were counted at home at the time of the 2001 Census, it does not reflect the total number of persons who usually reside within the Northern Planning Area.

³ These persons, while not counted at home on the night of the Census, still resided within the same SLA they were counted in – the SLA being within the Northern Planning Area.

Sub-region populations

As is shown in Figure 4 (overleaf), the Northern Planning Area population is spread unevenly across the sub-regions, with higher population numbers in specific coastal pockets. The total persons counted in each sub-region (including visitors from other parts of Australia) ranged from 33 persons in the rural sub-region of Aurukun Shire to 1807 persons within the Eastern Islands of the Torres Shire.

Excluding the mainland area of the Torres Shire, the combined Torres Islands (including the Eastern Islands), accounted for 14.9% of the Northern Planning Area population. The mining community of the Nhulunbuy SLA accounted for another 7.7% of the population. Sub-regions recording 3.0% or more of the total population of the Northern Planning Area included the diverse economic and itinerant town of Cooktown (in Cook Shire on the eastern coast of Far North Queensland), and the Indigenous communities of Galiwinku (just off the central north East Arnhem mainland) and Maningrida (in a coastal pocket in the West Arnhem).

Some sub-regions had a high proportion of persons who were not counted 'at home' on the night of the 2001 Census. This is important, as it highlights sub-regions with many persons who are there only on a temporary basis, often for work or travel. These sub-regions include Cooktown (68.3% counted at home), which has an itinerant working population and is also a stopover for visitors travelling to Cape York and other parts of Far North Queensland. Another sub-region is Weipa – South (45.2% counted at home); with mining related workers, including contractors, who fly in and fly out (this sub-region is located outside the main Weipa township). Another is Karumba (39.8% counted at home) in Cook Shire on the western coast of Far North Queensland, a town catering for marine-based tourism. Other sub-regions with less than 50% of their population counted at home were located in non-urban areas, classified as 'rural' areas (Table 4).

In general, sub-regions in the East Arnhem Balance, Groote Eylandt, Gulf and West Arnhem SLAs of the Northern Territory component, recorded the most stable (least mobile) populations. For most of these sub-regions, apart from rural sub-regions (with fewer Indigenous persons), over 80% of each population was located at the same address five years before the 2001 Census (Tables 5 and 6).

Gender and age of the Northern Planning Area population

The total male population counted in the Northern Planning Area was slightly higher than the total female population, with a ratio of 114 males to every 100 females. This could be due to the higher proportion of males (61.0% of the total labour force population) who are either employed or actively looking for work in the Northern Planning Area compared to females.

The dependent⁵ age group of 0 to 14 years had the highest number of persons in the Northern Planning Area, and comprised 29.0% of the population. While there are slightly more males than females aged 0 to 14 years, a higher proportion of the

⁵ The age groups of dependents are defined as persons aged 0 to 14 years and 65 years and over.

female population (29.8%) was in this age group, compared with males (28.3%). Conversely, the other dependent age group, of 65 years and over, had the lowest number of persons of any age group (5.3% of the total population). Males comprised 55% of this age group (Tables 10, 11 and 12).

Compared with the number of persons under 10, the number of persons aged between 10 to 24 years notably decreased, particularly for persons aged 15 to 19 years (see Figure 5). This is probably because some move away to obtain education, further qualifications or work. From the age of 25 years, the total number of persons then starts to increase, and stabilises until after the age of 39 years, when numbers start to decline. The ratio of males to females is similar in this age range. However, in the population older than 39 years, there are generally more males to females in each age group.

Gender and age of the sub-region populations

The proportion of males to females was generally similar across the sub-regions. However, in some sub-regions, males comprised over 60% of the population. These included the sub-region of Nhulunbuy – South (65.8% male), which also recorded a low proportion of persons counted at home (probably related to people ‘flying in’ for mining-related work). The other sub-regions with a low proportion of females were in rural areas of the Queensland component of the Northern Planning Area (Tables 7, 8 and 9).

In some sub-regions, over 80% of the population was in non-dependent age groups. Three of these sub-regions, Burke – Rural, Gulf – South of Borroloola and Nhulunbuy – South, were located in mining townships (Tables 13, 14 and 15).

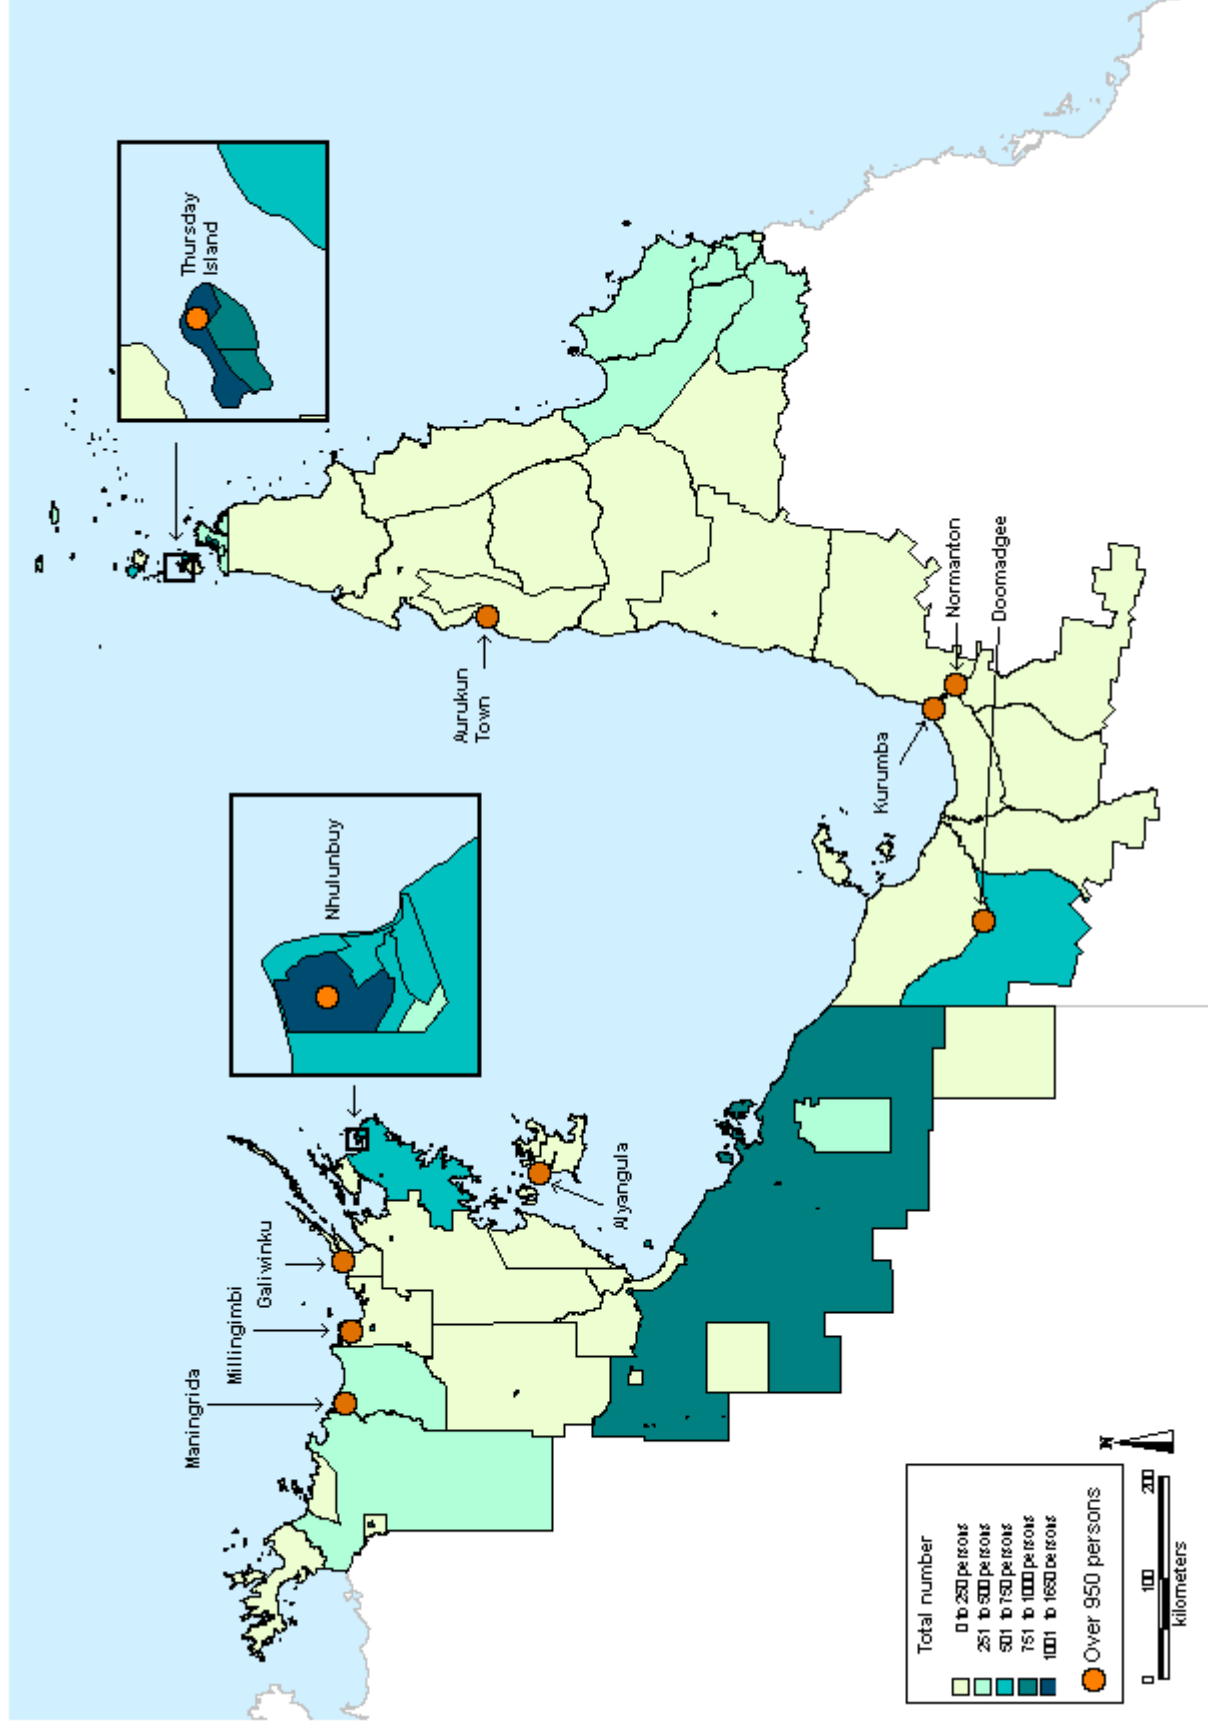

In general, sub-regions with Indigenous communities had the highest proportions of dependent populations, especially in the age group of 0 to 14 years. The proportion of persons in the age group of 65 years and over was higher than average in rural areas, including several sub-regions in the Shires of Carpentaria and Cook. However, in the non-Indigenous and non-rural sub-region of Karumba (in Carpentaria Shire), 26.6% of its population was aged 65 years and over. This sub-region has the highest percentage of dependants aged 65 years and over (26.6%) in the area. Moreover, this group of people accounted for 13.5% of all persons aged 65 years and over in the Northern Planning Area. Karumba also had a relatively high (63.8%) non-dependent population (Tables 13, 14 and 15).

Fertility, mortality and morbidity

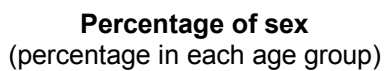

For the 2002 calendar year, a total of 456 births was registered in the Northern Planning Area. In 2002, a total of 249 deaths was registered for people whose usual place of residence was in the Northern Planning Area (Table 23).

Over the three-year period from 2000 to 2002, the main cause of death recorded for usual residents of the Northern Planning Area was diseases of the circulatory system (67 registered in 2000, 66 in 2001 and 65 in 2002). These diseases included ischaemic heart disease and cerebrovascular disease (stroke). The next highest cause of death recorded was neoplasm, with a total of 139 over the three-year period.

Figure 4 Total number of persons counted by Collection District, Northern Planning Area, 2001

Age group by sex, Northern Planning Area, 2001

2 The cultural characteristics of the Northern Planning Area

As the Northern Planning Area has a relatively high proportion of Indigenous persons, this section mainly examines the demographic, social and economic characteristics of these persons. The majority of Indigenous data were sourced directly from the Indigenous Profile Tables collated by the ABS Census of Population and Housing, 2001. Statistics of this nature must be used as a guide only. They can be uncertain as some people choose not to identify their Indigenous status and others are not available at the time of the census.

Indigenous persons in the Northern Planning Area

The Northern Planning Area is strongly characterised by Indigenous cultures, with over half of the population stating that they were from an Indigenous background at the time of the 2001 Census. The Indigenous persons counted represented 59.5% (29 126 persons) of the total Northern Planning Area population. A further 35.2% (17 203 persons) stated that they were non-Indigenous, while the remaining persons 5.3% (2584 persons) did not state their Indigenous status.

Although a slightly higher proportion of males was counted in the Northern Planning Area, the proportion of males to females with an Indigenous background was relatively similar. This was the case for each age group of Indigenous persons.

The figures clearly highlight both a younger and more dependent⁶ age structure of the Indigenous population compared with the non-Indigenous population in the Northern Planning Area.

Education levels of the Indigenous population were relatively low compared with the non-Indigenous population. At the time of the 2001 Census, well over half of all Indigenous persons aged 5 years and over stated that they had completed some level of schooling. However, 80% of these persons had only completed year 10 or below, with nearly 3.5% of Indigenous persons aged 5 years and over stating that they never attended school. A surprising result, considering the age of compulsory schooling, was that only 74.0% of Indigenous persons aged 5 to 14 years were currently attending an educational institution. Of the total Indigenous persons aged 15 years and over, only 4.9% had obtained some form of a post-school qualification. early half of Indigenous persons aged 15 years and over in the Northern Planning Area stated that they were in the labour force (49.2% or 8631 persons). The highest source of employment for Indigenous persons was in the Community Development Employment Program (CDEP)⁷, accounting for well over 60%. At the time of the

⁶ Although the Indigenous population has a higher proportion of persons classified as dependents, the majority are within the 0 to 14 year age group.

⁷ CDEP was developed as a response to Aboriginal and Torres Strait Islander Communities

2001 Census, only 6.2% (538 persons) of Indigenous persons in the labour force were classified as being unemployed.⁸

Over the ten-year period to 2001, the total number of persons classifying themselves as Indigenous in the Northern Planning Area increased from 24 384 in 1991, to 26 557 in 1996, to 29 126 persons by 2001.

Nearly three-quarters of the Indigenous population stated that they were of Aboriginal origin. Another 20.3% of the Indigenous persons were of Torres Strait Islander origin, and 5.3% stated that they were of both Aboriginal and Torres Strait Islander origin. The Indigenous status of a person was clearly correlated to where they lived at the time of the Census.

Socio-economic status of Indigenous persons in the Northern Planning Area

All the Indigenous communities in the Northern Planning Area have a very low socio-economic status (SES) compared to the rest of Australian society. At each Census, the ABS calculates several measures of SES for the whole of Australia that apply as an average to small clusters of households (Collection Districts). These SEIFA (Socio-Economic Index For Areas) scores are calculated from the limited set of variables available from the Census that relate to SES; nevertheless, they provide the only consistent set of SES scores that rank all areas of the nation. The SEIFA scores for Queensland Indigenous communities, and those in the Northern Planning Area in particular, are the lowest in the State. Scores for communities in Arnhem Land are similar. In contrast, mainly because of large disposable incomes, the non-Indigenous population in mining centres such as Weipa have SEIFA scores in the top 20% for Queensland.

Indigenous persons in the sub-region populations

Indigenous persons accounted for nearly 60% of the Northern Planning Area population in the 2001 Census. The total number of Indigenous persons in a sub-region varied substantially, with only 6 Indigenous persons counted in the sub-region of Carpentaria South – Rural, increasing up to 1616 Indigenous persons in the East Islands of the Torres Shire. In most sub-regions in the East Arnhem Balance, Gulf, West Arnhem and Torres SLAs, approximately 90% of the population was recorded as Indigenous (Table 24).

The number of Indigenous males was similar to the number of Indigenous females in Indigenous communities (Tables 25 and 26). In other sub-regions, the difference between the numbers of males and females varied quite widely.

The distribution of Indigenous persons by status is clearly defined by their geographic location (Tables 27 and 28). Very few persons in the Northern Territory component of the Northern Planning Area were either of Torres Strait Islander origin, or of both Aboriginal and Torres Strait Islander origin (a total of 90 persons, or less than 1% of Indigenous persons).

⁸ While this could be perceived as a relatively low proportion of persons who are unemployed, the proportion and number of persons employed under the Community Development Employment Program do need to be taken into consideration.

The highest numbers of Torres Strait Islander persons were counted in the islands of the Torres Strait, with the largest numbers in the East Islands sub-region. On the mainland, there was a relatively high number of Torres Strait Islander persons in the sub-region Torres – Cape York Bamaga (80.1% of the Indigenous population). While the Weipa sub-regions had lower numbers of Torres Strait Islander persons, they still represented a sizeable proportion (24.7% to 48.4%) of the Indigenous populations, and this was also the case in the Cook Shire – Napranum sub-region (18.5%).

Indigenous persons from both an Aboriginal and Torres Strait Islander background were located in the same geographic areas as persons from only a Torres Strait Islander background.

Aboriginal persons, while not strongly represented over the entire Torres Shire, dominated the other sub-regions of the Northern Planning Area. In most of these sub-regions, the proportion of Aboriginal persons was over 90% of Indigenous persons. The highest numbers of Aboriginal persons were counted in the West Arnhem – Maningrida and East Arnhem – Galiwinku sub-regions (Tables 27 and 28).

Other cultural backgrounds in the Northern Planning Area

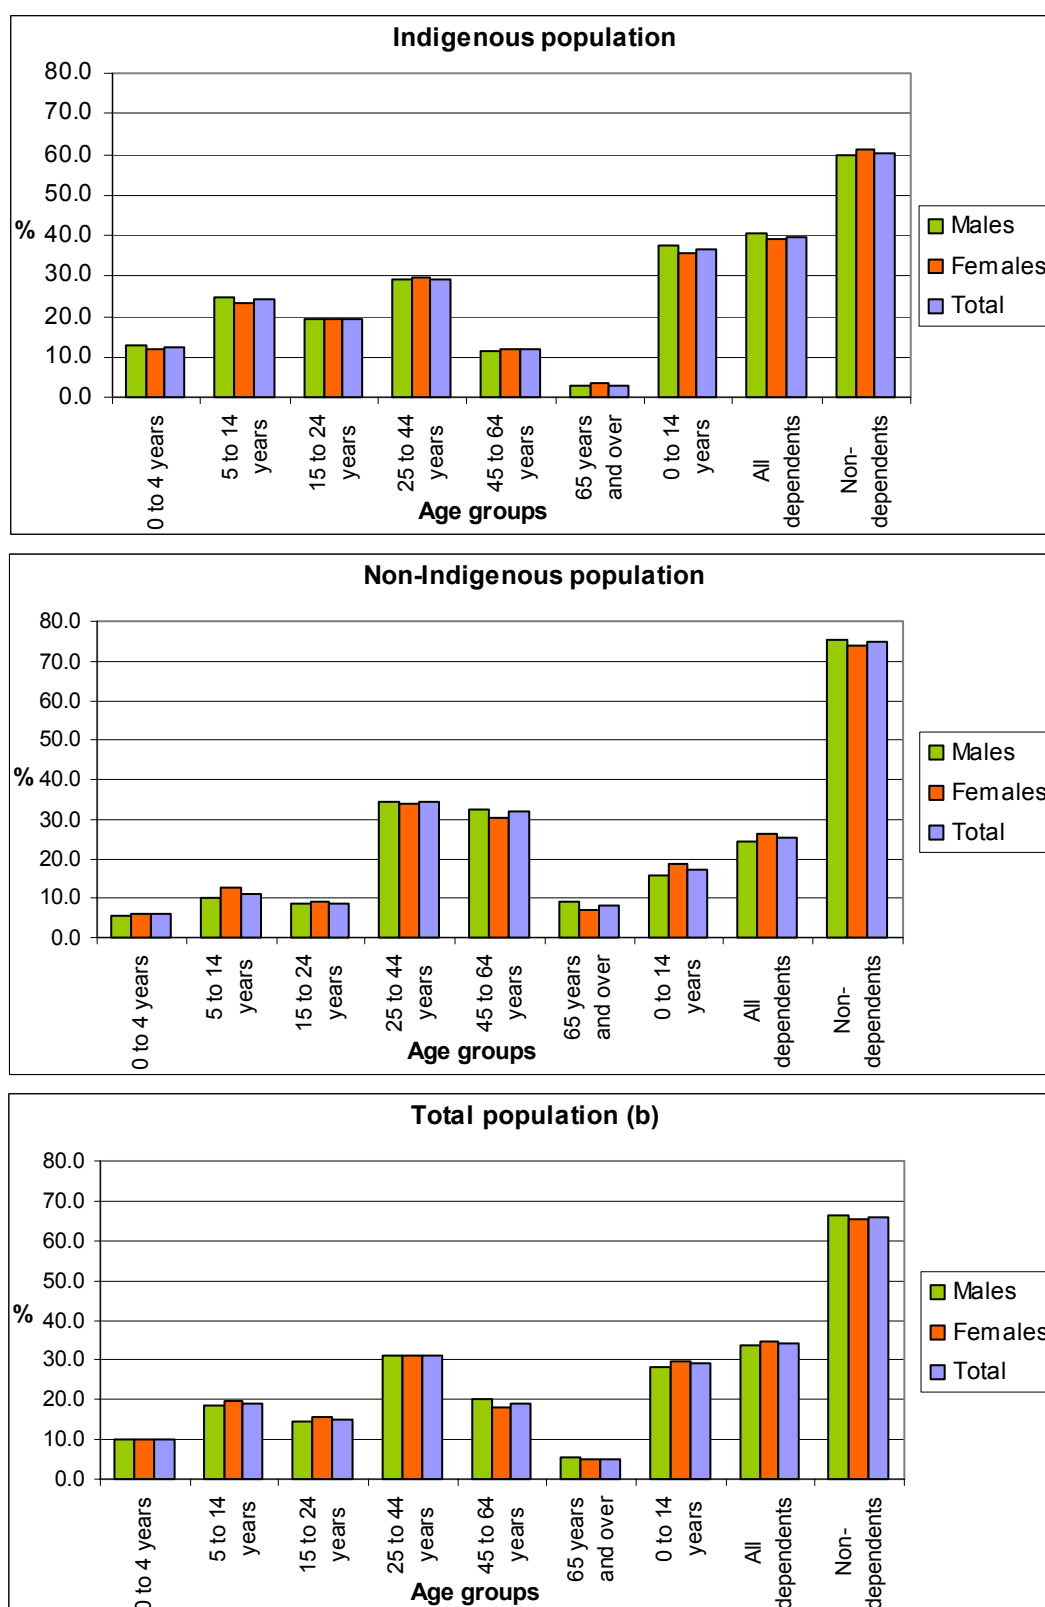

At the time of the 2001 Census, 43 557 persons (89.0%) counted in the Northern Planning Area stated that they were born in Australia.

Nearly 50% of all persons stated that they spoke English as their main language at home. This was closely followed by Australian Indigenous languages, accounting for 15 540 persons (31.8%).

In the Northern Territory component of the Northern Planning Area, persons who spoke an Australian Indigenous language at home (57.6% or 12 043 persons) were nearly double the number who spoke English at home as their main language.

Figure 11 shows the location of sub-regions in the Northern Planning Area with high proportions of persons who spoke an Australian Indigenous language as their main language at home. Apart from one sub-region in the Queensland component of the Northern Planning Area (Aurukun – Town), in most sub-regions in the East Arnhem Balance, West Arnhem and Groote Eylandt SLAs, an Australian Indigenous language was the main language spoken at home in over 80% of the population.

3 Other social characteristics of the Northern Planning Area

Due to the considerable amount of social data available, particularly from the 2001 Census, the data in this section has been analysed and reported by grouping similar social characteristics. This section reviews the composition of Northern Planning Area households, and their types of housing and tenure. To determine the educational levels of the population, specific education data were analysed, as well as computer and internet usage.

Family type, household type and marital status in the Northern Planning Area

For the Northern Planning Area, the average household size in occupied private dwellings in 2001 was approximately 3.8 persons. However, household size varied significantly across the sub-regions. In the Nhulunbuy and Weipa sub-regions, and in rural areas in the Cook Shire, the average household size was around 2.9 persons. The average household size was highest in sub-regions located in the SLAs of East Arnhem Balance and West Arnhem, averaging more than 5 persons.

Household types

A total of 9504 families was counted in the Northern Planning Area. Nearly 50% were classified as a couple family with children, 24.2% were couple families without children, and 23.4% were one-parent families (Tables 29 to 32).

Of the total Northern Planning Area population⁹ living in an occupied private dwelling at the time of the Census, 93.1% of persons stated that they were a related family member living in a family household. Persons living in a lone person¹⁰ household accounted for 4.4%, while only 1.4% were members of a group household (Tables 33 to 35).

Marital status

Of the total Northern Planning Area population aged 15 years and over, 13 772 persons stated that they were married (either registered or de facto) at the time of the 2001 Census. Of these, 71.3% were in a registered marriage, with the remaining 28.7% in a de facto relationship. De facto relationships were significantly more common in the Queensland component of the Northern Planning Area.

Of the population aged 15 years and over, 41.6% (14 623 persons) stated that they had never been in a registered marriage before. Males represented 56.3% of these persons. Another 4.5% were a widow or widower (1587 persons), of which nearly three-quarters were females, and 7.9% (2764 persons) were either separated or divorced.

⁹ Excludes visitors from within Australia.

¹⁰ A lone-person household is a person who lives in a dwelling on his/her own, or shares a dwelling with another individual or family but makes provision for his/her own food.

Family type and household type of the sub-region populations

Across the sub-regions of the Northern Planning Area, most persons living in occupied private dwellings were in a family household. Sub-regions with less than 80% of their population not in a family household were located in communities based on a specific industry sector, such as rural areas with an agriculture, forestry and fishing employment base, as well as Burketown and Cooktown. The Carpentaria South – Rural sub-region had the lowest proportion in a family household (43.7% of its population). Conversely, these sub-regions had higher proportions of persons in either a lone person or group household (Tables 36 to 41).

One-parent families were more common in Indigenous sub-region communities. The highest proportion of one-parent families (22.1%) was in Torres Shire SLA, which also had the highest proportion of couple families with children (21.0%). The highest proportion of couple families without children was in Cook (excluding Weipa) SLA (19.3%).

Dwelling structure and tenure type in the Northern Planning Area

The most common form of private dwelling structure in the Northern Planning Area in 2001 was a separate house, accounting for 60.3% of all private dwelling structures (Tables 42 to 45).

About 16.7% of private dwelling structures were some form of 'other' dwelling. These included caravans, cabins, houseboats, improvised homes, tents, sleep-outs or a house/flat attached to an office/shop. Over half of the 'other' dwelling structures were a caravan, cabin or houseboat, with the remainder usually some form of improvised home rather than a structure attached to another building.

Flats or units accounted for only 6.0% of all private dwelling structures, and these were only located in some sub-regions. Approximately 12% of private dwellings at the time of the 2001 Census were unoccupied.

Rentals were the most common type of tenure for private dwellings, accounting for 51.3% of all tenure types.¹¹ A total of 6985 rental private dwellings were counted in the area, of which 83.2% were a separate house.

The median weekly rent of rental private dwellings in the Northern Planning Area was in the range \$1 to \$99, and lower in all the SLAs in the Northern Territory component (between \$1 and \$49).

Of the total private dwellings being rented in the Northern Planning Area, 581 occupied private dwellings were classified as state/territory housing authority homes. Another 6118 (87.6%) were rented through an 'other' type of landlord, with most of these dwellings being a separate house.

¹¹ The proportion includes private dwellings not occupied at the time of the Census; therefore the proportion of rentals to all private dwellings could be higher or lower depending upon the tenure type of the occupied private dwellings. By excluding unoccupied private dwellings the proportion of all rentals to all occupied private dwellings increases to 58.2%.

Private dwellings that were fully owned or being purchased at the time of the Census accounted for just over 16% of all private dwellings in the area. More than 80% of these private dwellings were fully owned. Of the total fully owned dwellings, 44.9% were an 'other' type of dwelling structure, and 41.2% were a separate house.

The total number of private dwellings increased from 9775 in 1991 to 13 679 in 2001 (an increase of 3704 dwellings). The most substantial increase in private dwellings was from 1996 to 2001 (2918 dwellings).

There was a very small increase in the number of separate house private dwellings from 1991 to 1996 (a total of 82), but a substantial increase from 1996 to 2001 (from 6670 to 9426).

Flats, units and apartments almost doubled in number from 1991 to 2001, while the number of semi-detached, row or terrace housing decreased from 1996 to 2001. Conversely, the number of 'other' dwelling structures increased steadily over the 10-year period.

Most of the population counted in an occupied private dwelling were in a separate house (82.3% or 38 025 persons). Another 6.0% (2774 persons) were in a caravan, cabin or houseboat. Nearly 4.0% of all persons in the Northern Planning Area were in an improvised home or tent or sleep-out.

Dwelling structure and tenure type of the sub-region populations

Separate houses were the most common type of dwelling in the Northern Planning Area, accounting for 60.3% of all dwelling structures. This was also the case in many of the sub-regions, with 81.7% recording over 50% of their dwelling structures as a separate house. In the sub-regions with less than 50% of separate houses, the types of dwelling structure varied with their location (Tables 46 to 51).

In the sub-regions of Burke – Rural and Weipa – South, each located in a mining community, 'other' dwellings were the main form of dwelling structure. Flats and units were the main dwelling in the mining sub-region of Nhulunby – South.

Several rural sub-regions also recorded other dwellings, including caravans, cabins and houseboats, as the main dwelling structures.

In the sub-regions of Thursday Island – East and Thursday Island – West (in Torres Shire), semi-detached houses or flats and units were the most dominant type of dwellings structure.

In the sub-region of Karumba (in Carpentaria Shire), nearly half of the dwellings were a caravan, cabin or houseboat. Karumba, located off the west coast of Queensland, is a popular 'tourism' spot for fishing, camping and other recreational activities.

Educational profile of the Northern Planning Area

Of the total Northern Planning Area population aged 15 years and over, 53.6% of persons stated that they had completed up to year 10 or below. Nearly half of these persons had completed year 10, and another 29.1% had completed either year 11 or year 12. There was no significant difference between males and females in the level

of education completed, and only a slight difference between males and females who did not attend school (3.5% of females compared with 2.8% of males). Persons stating that they never attended school accounted for 3.1% (1079 persons) of the population aged 15 years and over (Table 52).

The proportion of persons who attended some form of primary and/or secondary school, and the level of schooling completed, varied across the SLAs and between the Northern Territory and Queensland components of the Northern Planning Area. Many of the Northern Territory sub-regions, particularly Indigenous communities, had very low proportions of persons who had completed years 11 or 12 (on average less than 15%). In the Queensland sub-regions, there were generally higher proportions who had completed years 11 or 12.

At the time of the 2001 Census, 69.8% of persons in the Northern Planning Area stated that they were not attending any type of educational institution. Of the persons attending an education institution at the time of the Census (9762 persons), 56.9% were at infant or primary school, 21.1% were at secondary school and 9.7% were at pre-school. Another 12.3 % were attending either a technical or further educational institution, or a university or other tertiary institution (Table 53).

Educational profile of the sub-region populations

Across the Northern Planning Area, the level of schooling completed by persons aged 15 years and over varied substantially. Sub-regions in the Groote Eylandt SLA (apart from the mining town of Alyangula) had the lowest proportions completing year 11 or 12 (less than 10% of their populations). In the East Arnhem Balance sub-regions, over 40%, on average, of their populations had only completed up to year 8 or below. In the sub-region of Umbukumba in Groote Eylandt SLA, 77.0% of the population had only completed up to year 8 or below. The West Arnhem SLA sub-regions had higher proportions of persons completing years 11 or 12 than the sub-regions of the East Arnhem Balance and Groote Eylandt, but 21.3% of West Arnhem persons did not go to school (Tables 54 to 56).

Indigenous communities in the Queensland component of the Northern Planning Area had slightly higher proportions of their populations who had completed years 11 and 12, compared with the Indigenous communities in the Northern Territory.

In rural sub-regions of the Northern Planning Area, at least 30% of the populations aged 15 years and over had completed years 11 or 12. In mining sub-regions at least 50%, on average, had completed years 11 or 12.

Computer and internet usage in the Northern Planning Area

At the time of the 2001 Census, all persons were asked if they had used a personal computer at home in the week prior to the Census. At this time, 14.2% (6962 persons) of the population of the Northern Planning Area had used a computer at home. A further 78.5% (38 400 persons) had not used a computer at home, while 7.3% did not state whether they had used a computer (Tables 57 to 59).

Of the 6962 persons who did use a computer at home, 22.4% (1533 persons) were aged between 0 to 14 years. Another 59.9% were aged between 25 and 54 years, with the highest proportion in the 35 to 44 years age group.

The SLA of Nhulunbuy, which had the highest population in the Northern Territory component of the Northern Planning Area, also had the highest proportion of its population using a computer at home (Table 63). Of the total Nhulunbuy population, 48.4% had used a computer, with the highest users in the age groups of 0 to 14 years and 35 to 44 years. The SLA of West Arnhem had the lowest number of persons who used a computer at home (226 persons, or 5.2% of its population), while the SLA of East Arnhem Balance had the lowest proportion (316 persons, or 4.6% of its population).

In the Queensland component of the Northern Planning Area, Cook Shire (excluding Weipa) had the highest number of persons stating they had used a computer at home. The Weipa sub-regions had the highest proportions of their population using a computer at home (44.4%), with the highest numbers in the age groups of 0 to 14 years and 35 to 44 years.

Of the total Northern Planning Area population, 14.4% (7055 persons) stated that they had used the internet at home and/or at work and/or elsewhere. The highest usage of the internet was at home only (39.3% of those who used the internet). A further 17.3% of all persons using the internet used it both at home and at work, and 1.8% used the internet both at home and elsewhere.

Persons using the internet at work only, accounted for 21.7% of all persons using the internet, and persons using the internet elsewhere only, accounted for 18.2% of all internet usage. There is no time series data available for computer and internet use, as the questions about this topic were asked for the first time in the 2001 Census.

Computer and internet usage of the sub-region populations

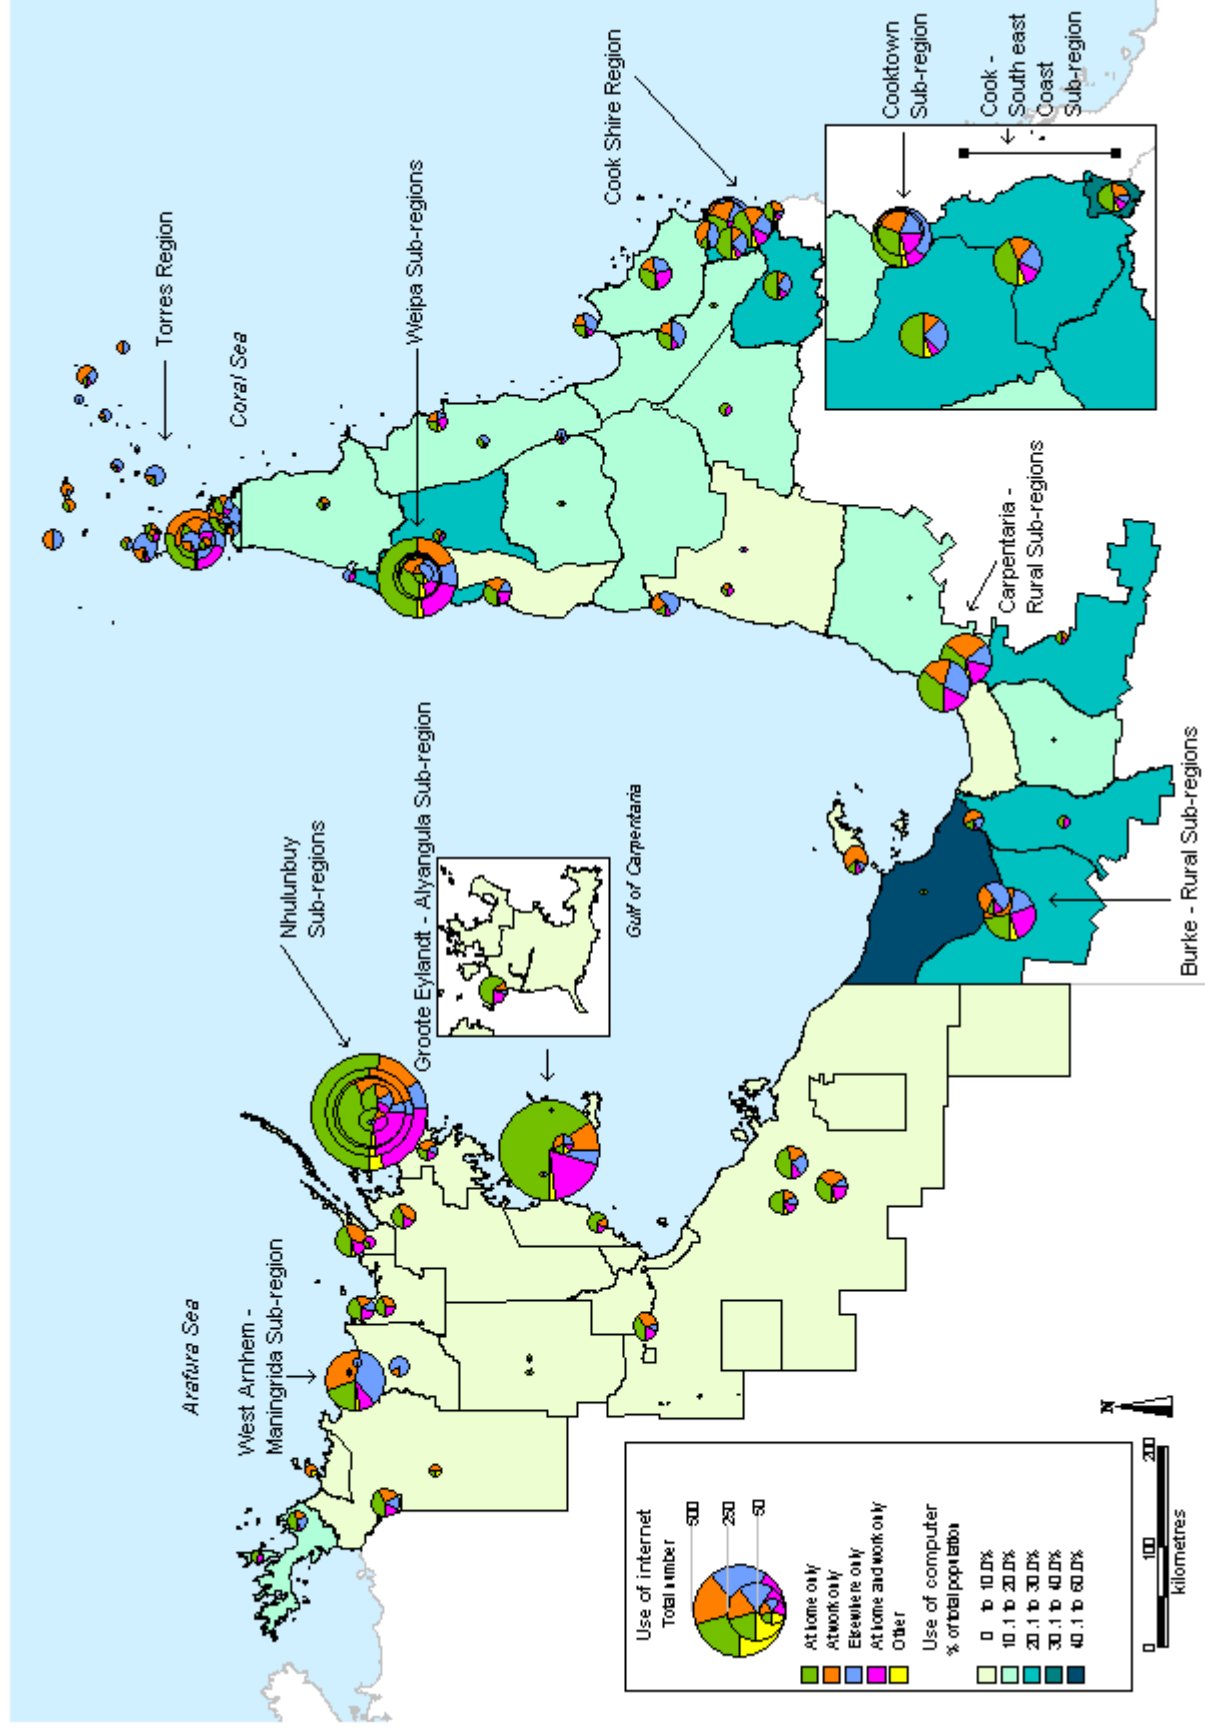

Further analysis of computer usage in the week before the 2001 Census indicated that sub-regions with a higher proportion of their populations using a computer at home, also had a higher proportion using the internet at home and/or at work and/or elsewhere (Tables 57 to 63).

Only some sub-regions in the Northern Planning Area had a higher proportion of their population using both a computer at home and the internet at home/or at work and/or elsewhere. Apart from the sub-region of Cooktown (with just over 20% using a computer at home and the internet at any location), the sub-regions with the most significant use of both computers and the internet were all located in mining towns. In these sub-regions, over 40% of their population, on average, had used a computer at home, and over 35% had used the internet at home and/or at work and/or elsewhere.

All the sub-regions in the Nhulunbuy SLA had the highest proportions (compared with all other SLAs) of their populations using a computer at home (over 40% in both Nhulunby North and Nhulunbuy Central). Nhulunbuy SLA also had the highest number of persons using the internet at home and/or at work and/or elsewhere. Usage was also high in the Weipa mining sub-regions, in the mining town of Alyangula (in the Groote Eylandt SLA), and in the Burke – Rural sub-region.

Most sub-regions with the lowest proportion of usage of either a computer at home or internet anywhere were in the Indigenous communities (less than 10% of the population in most of these sub-regions).

Figure 12 Computer and internet usage by Collection District, Northern Planning Area, 2001

4 The economic characteristics of the Northern Planning Area

This section reviews economic data related to the labour force of the Northern Planning Area, including employment, individual income and household income. Although the ABS conducts a quarterly labour force survey, this data is collected at larger scales than the Northern Planning Area (data is collected for Australia, the states and the ABS Labour Force Regions). Further, the data for the Labour Force Regions have a high standard error, as only a small number of persons in each Region is represented in the survey samples. As a result, the 2001 Census data from the Basic Community Profiles tables were used for reviewing the economic characteristics of the Northern Planning Area.

Labour force and employment characteristics in the Northern Planning Area

At the time of the 2001 Census, 18 900 persons in the Northern Planning Area stated that they were either employed or actively looking for work in the four weeks preceding the Census (Table 64). This group is defined as the labour force, and represented 54.3% of the total population aged 15 years and over. Males accounted for 61.0% of all persons in the labour force.

Of the total persons in the labour force in the Northern Planning Area, 94.9% stated that they were employed (Table 65). Of total employed persons, 44.1% were classified as part-time workers, as they worked less than 35 hours in all jobs. Persons working 35 hours or more in all jobs thus accounted for 55.9% of all employed persons. Of total males employed in the area, 58.4% were employed full-time, and 37.8% part-time. Of total females employed in the area, 46.5% were employed full-time, and 49.6% part-time.

A total of 963 persons in the area were not employed at the time of the Census, accounting for 5.1% of total persons in the labour force. The Queensland component of the area recorded an unemployment rate of 5.5%, compared with 4.4% in the Northern Territory component. In the Queensland component, 5.9% of total males in the labour force were unemployed.

In the Northern Planning Area, 37.4% (13 021 persons) of persons aged 15 years and over stated that they were not in the labour force, and were hence not actively looking for work at any time in the four weeks preceding the 2001 Census. Of these persons, 57.5% were females. The highest proportion of persons not in the labour force (19.9%) was in the 25 to 34 years age group. Another 15.1% were in the 65 years and over age group, 14.9% were in the 15 to 19 years age group, and 14.5% were in the 55 to 64 years age group (Table 66).

A review of the labour force status of individual age groups showed that certain age groups have a lower labour force participation than others. As would be expected, the highest proportion of persons not in the labour force was in the group aged 65 years and over (76.1% of these persons). Just over 50% of the populations in the

age groups 15 to 19 years and 55 to 64 years were not in the labour force (Table 65).

While the Northern Territory and Queensland components of the Northern Planning Area had a similar number of persons who were not in the labour force, the proportion of these persons in the Northern Territory component was significantly higher (nearly 45% of the total persons aged 15 years and over, compared with 32.4% in the Queensland component).

From 1991 to 2001, the number of persons not in the labour force in the Northern Planning Area increased by 2654 persons.

The largest industry of employment was government administration and defence, which accounted for 36.1% (6486 persons) of all employment in the Northern Planning Area (figures 13 to 16 and Tables 70 to 71). However, it should be noted that, as part of the ABS Australian and New Zealand Standard Industrial Classification (ANZSIC), all Community Development Employment Program (CDEP) participants are classified under this industry. Of the total persons employed in the Northern Planning Area, 33.3% (5965 persons) stated that they were employed in the CDEP. As highlighted in the cultural characteristics section of this report (Part 2), most persons (92.7%) employed under the CDEP stated that they were from an Indigenous origin.

The second largest industry of employment was the mining industry, which accounted for 8.5% of all persons employed in the area. The education industry, and the health and community services industries also recorded relatively high proportions (7.8% and 7.0% respectively). The retail trade industry recorded just over 6.0%, and the construction industry accounted for 5.3% of employment. The agricultural, forestry and fishing industry accounted for 4.5% of employment; however, this industry was located mostly in rural areas.

At the time of the 2001 Census, 120 persons were employed in marine industry sectors: 23.3% in the rock lobster fishing industry, 23.3% in aquaculture, 17.5% in coastal water transport, and 10.0% in the marine equipment retailing industry.

Labour force and employment characteristics in the sub-region populations

At the time of the 2001 Census, 54.5% of persons in the Northern Planning Area were in the labour force. Across the sub-regions, the proportion ranged widely from 16.1% of persons in the Angurugu sub-region (in the Groote Eylandt SLA¹²) to 85.2% in Weipa Central/North (Tables 68 and 69).

The highest proportion of persons in the labour force was in the sub-regions dominated by one main industry. Sub-regions located in mining communities recorded at least 70% of their populations in the labour force (apart from the sub-region of Weipa – South).

¹² A percentage of zero was recorded for the sub-region of Groote Eylandt – Rural. However, it appears that over 30% of this sub-region's population aged 15 years and over did not state a labour force status.

In general, the unemployment rate in each sub-region was fairly similar to (if not lower than) the unemployment rate over the entire Northern Planning Area. However, eight sub-regions recorded an unemployment rate of over 10%, with six of these sub-regions located in an Indigenous community. The remaining two sub-regions were located in areas that were not necessarily dominated by one main type of industry sector. For example, the Cook Shire – South East Coast sub-region has a relatively consistent representation across seven industries. This sub-region had the highest unemployment rate, of 23.2% (Table 68, see also Figure 17).

The Indigenous communities in the Northern Territory component of the Northern Planning Area recorded higher proportions of persons not in the labour force than the communities of the Queensland component.

In the Groote Eylandt SLA as a whole, the proportion of persons not in the labour force was 43.6% of all persons aged 15 years and over. However, this proportion varied significantly in the Groote Eylandt sub-regions, ranging from 74.8% in Angurugu to only 17.2% in Alyangula. Most sub-regions in the East Arnhem Balance SLA also recorded varying proportions not in the labour force (ranging from 42.6% in Yirrakala to 77.8% in Galiwinku).

The type of employment by industry varies across the sub-regions in the Northern Planning Area. In some cases, employment in an entire sub-region is dominated by one major industry.

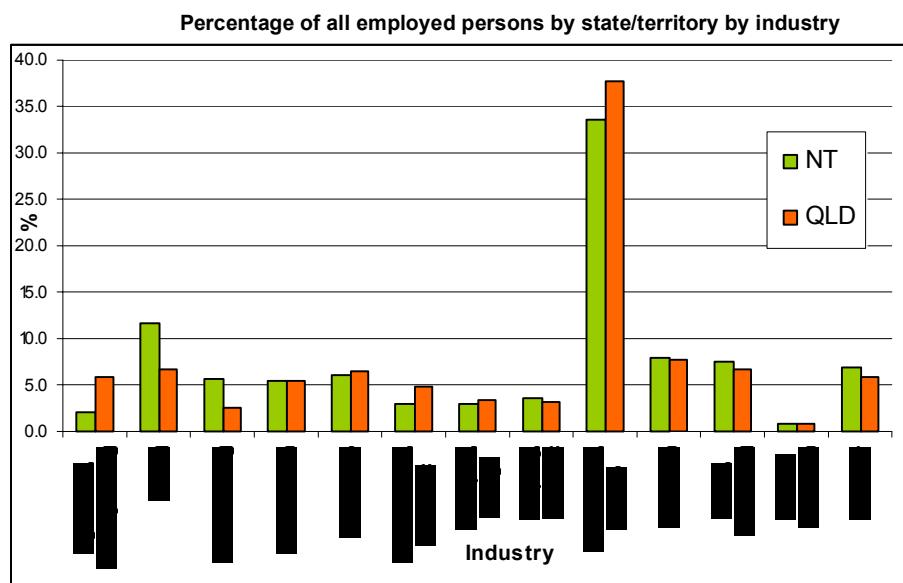

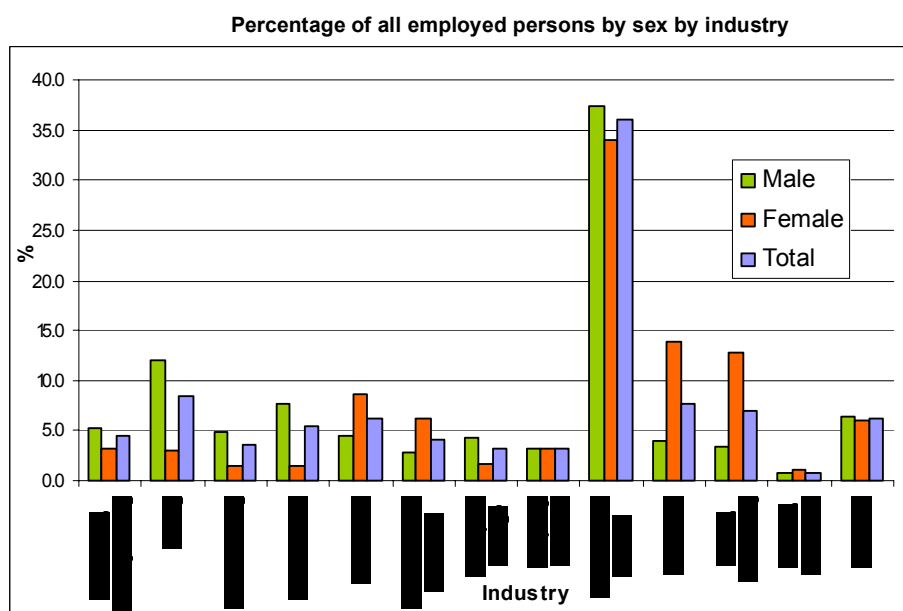

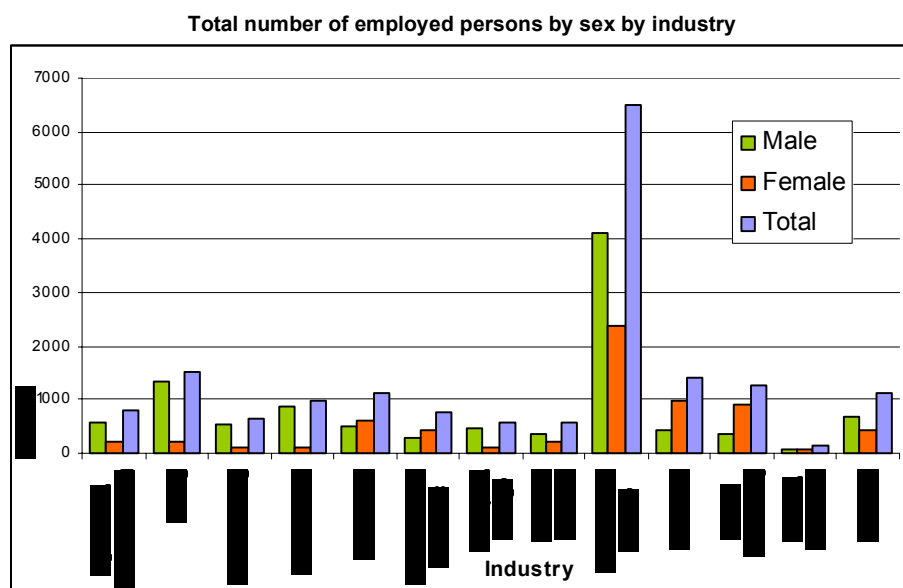

Government administration and defence was the largest industry of employment in the Northern Planning Area. Persons employed in this industry were spread across the entire area, with the numbers varying from sub-region to sub-region. The highest numbers of persons employed in this industry were in the Torres SLA, where the Central West, East and Northern Islands each had over 74% of employment in this industry. In the Cape York component of the Torres SLA, high proportions of the population in several Indigenous communities, including the sub-regions of Bamaga, Injinoo and New Mapoon, were also employed in this industry. In fact, the Torres SLA accounted for nearly 30% of all persons in the Northern Planning Area who were employed in this industry. Persons employed in the government administration and defence industry were also strongly represented across several sub-regions of the East Arnhem and West Arnhem SLAs (Tables 70 to 75).

Persons employed in the mining industry were located in ten sub-regions of the Northern Planning Area. In sub-regions where mining was a large employer, employment was also spread across service-providing industries, including construction, retail trade, education, and health and community services.

The agriculture, forestry and fishing industry accounted for 4.5% (805 persons) of all employment in the Northern Planning Area, but only existed in some sub-regions, mostly rural communities. In the sub-regions of Carpentaria North West – Rural and Carpentaria South – Rural, over 60% of total employed persons were employed in this industry, mostly in agriculture rather than forestry or fishing. A high number of persons in the Burke – Rural sub-region was employed in this industry (although the proportion of total employed persons was a lot lower than in other sub-regions). It appears that the sub-region of West Arnhem – Minjilang was the only non-rural area

with persons employed in this industry sector (21.0% of its employed persons, or 25 persons).

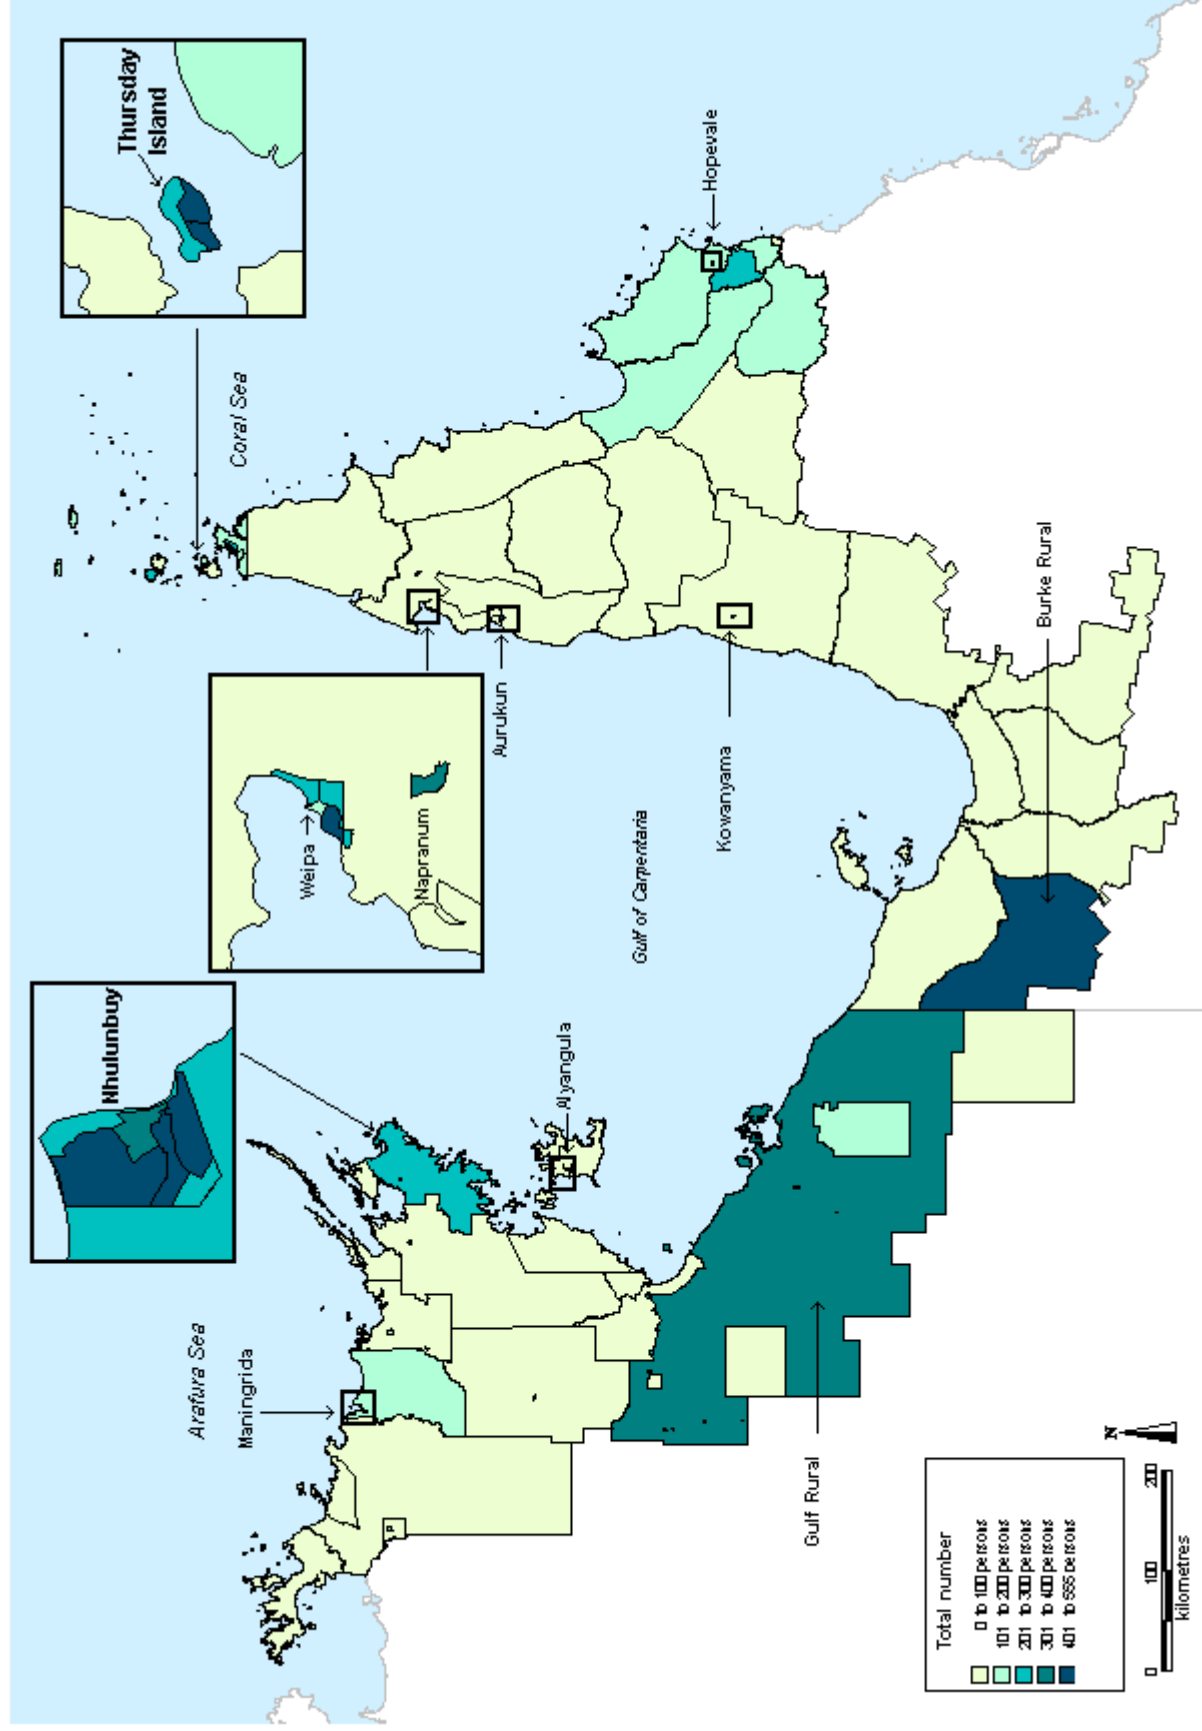

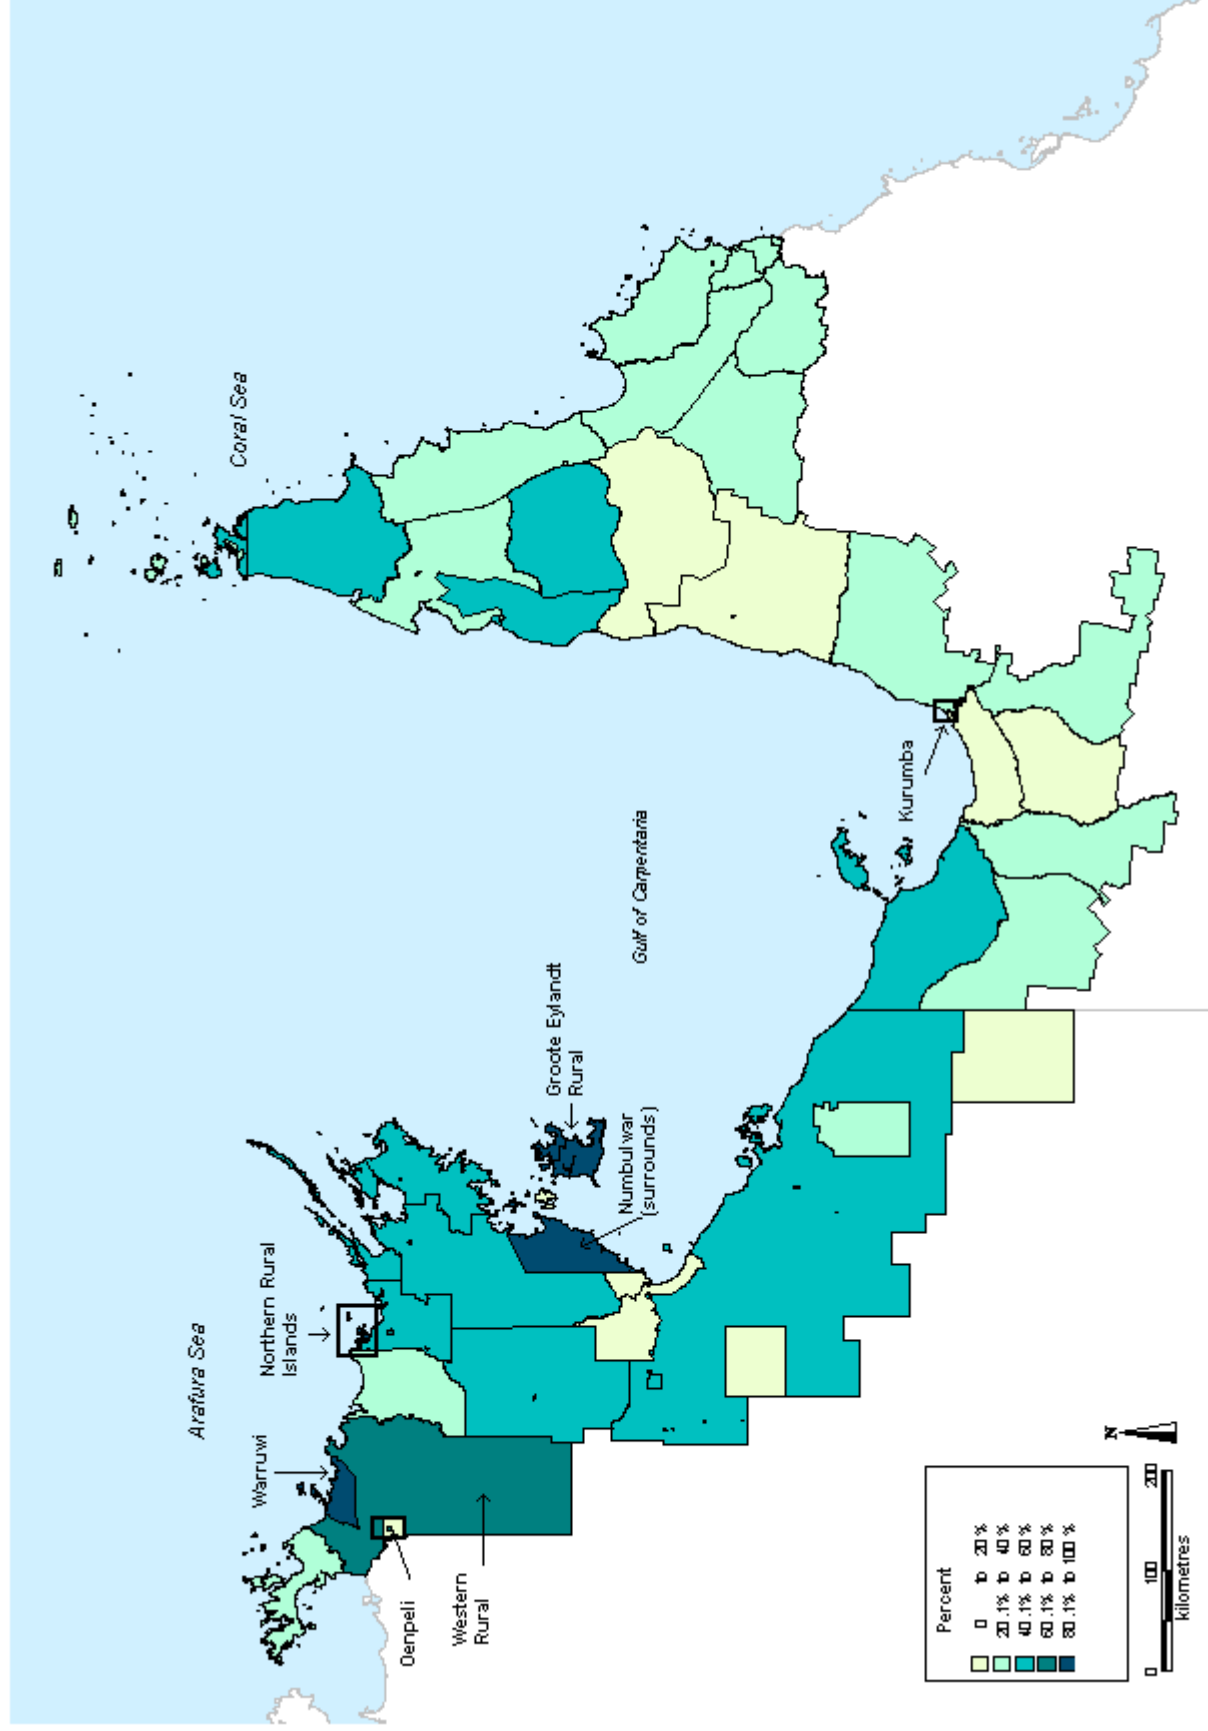

Figure 17 Persons not in the labour force by Collection District, Northern Planning Area, 2001

Income levels in the Northern Planning Area

Data for three types of income categories were collected by the ABS at the time of the 2001 Census: individual income, household income and family income (definitions are in the Glossary at the end of this report). This section examines individual income and household income data.

Individual income

Individual income levels were relatively low across the Northern Planning Area, with 52.1% of the population aged 15 years and over recording either a negative or nil income, or an annual income of up to \$15 599. Of this population, 5.1% (1780 persons) had a negative or nil annual individual income, and another 12.5% (4349 persons) had an annual individual income of less than \$8320. The highest proportion of persons was in the income range between \$8320 and \$15 599 (34.5% of the population aged 15 years and over). (See Tables 75 and 76.)

Another 17.1% of the population aged 15 years and over received an annual individual income of \$15 600 to \$31 199 (5936 persons), 10.5% received \$31 200 to \$51 999 (3638 persons), 6.3% received \$52 000 to \$77 999 (2192 persons), and 3.2% (1129 persons) received over \$78 000.

In general, the sub-regions in the Queensland component of the Northern Planning Area had larger proportions of persons with the higher individual incomes. However, most sub-regions in the SLA of Torres Shire recorded at least 60% of their populations with a negative or nil income, or less than \$15 600. These Torres sub-regions were the Cape York Indigenous communities and the Torres Strait islands, except Thursday Island (Tables 79 to 81).

Household income

At the time of the 2001 Census, 0.5% (or 51) of the total households in the Northern Planning Area had a negative or nil annual household income, while another 8.8% (849 households) had an annual household income of up to \$15 599. Households within the range of \$15 600 to \$31 199 accounted for 18.8% (1805 households), and those within the range of \$31 200 to \$51 999 accounted for 20.7% (1990 households). The 35.7% of households had an annual income of over \$51 999 (Tables 77 to 78, and 82 to 84). Note that 15.5% did not state their income.

Conclusion

The Northern Planning Area covers a vast area, spanning across a state and a territory of Australia, and is represented by several geographic levels of the Australian Standard Geographic Classification (ASGC). The area is just as wide-ranging in the unique identities of its smaller communities, with their diverse demographic, social and economic features. In this analysis, 71 sub-regional communities were initially identified as being distinct enough to be represented with their own set of data. However, during the analysis, it was found that several sub-regions displayed similar characteristics and, in some cases, sub-regions could have been aggregated.

An interesting result was that, in general, apart from many of the Indigenous communities, the demographic and social characteristics of the sub-regions were a consequence of a major industry dominating the economic base.

Group One – Mining

In ten sub-regions in the Northern Planning Area, mining was the most significant economic activity (defined by the major industry of employment in the sub-region or regional area). In the Queensland component, these were the Burke – Rural sub-region and all the Weipa sub-regions. In the Northern Territory component, the mining industry sub-regions were Groote Eylandt – Alyangula, Gulf – South of Borroloola, and all the Nhulunbuy sub-regions. Although the economic base of these sub-regions is primarily related to mining, they also have a higher proportion of service industries such as education; health and community services; retail trade; and accommodation, cafes and restaurants; and, in some sub-regions, manufacturing and construction. These communities have the lowest proportions of unemployed persons, and also have a low proportion of persons not in the labour force.

There is a high rate of mobility in the population (on average nearly 60% of each sub-region population was recorded at a different address five years before the Census). However, the mining industry populations do not appear to be short-term or temporary residents, because a significant proportion of persons were recorded at the same address one year prior to the Census. This 'medium' level of mobility could explain why most private dwellings in mining sub-regions are rented. However, home ownership is relatively high in the Burke – Rural sub-region (possibly because it also has an agricultural, forestry and fishing economic base).

In general, nearly 70% of the populations of mining communities are in a non-dependent age group, and most dependants are aged between 0 and 14 years. Family households dominate the household types in these communities; however, in particular sub-regions there is a sizeable number of persons living in lone person households.

Indigenous persons are not strongly represented in mining industry communities and, as a result, English is the main language spoken at home, rather than Australian Indigenous languages, as in other sub-regions. Computer usage at home

and overall internet usage was higher in the mining industry communities than in other sub-regions of the Northern Planning Area.

Three mining sub-regions, while having similar economic characteristics to the other mining sub-regions, have some slightly different demographic and social characteristics. These characteristics vary between the three sub-regions, but include a higher proportion of persons in a non-dependent age group; lower proportions of persons counted at home in the 2001 Census; higher ratios of males to females; and more varied household types, including lone person households, and different dwelling structures. Two of these sub-regions (Gulf – South of Borroolola and Nhulunbuy – South) are areas within a larger mining community that were established by mining companies to cater for employees near the mine site. The third sub-region, Weipa – South, provides other services to the overall mining area.

When the National Oceans Office is undertaking activities in these communities, the following features should be taken into consideration. The population is often physically located there for the medium term, although there appears to be some ‘fly-in fly-out’ movement in some communities. Also, educational levels, computer and internet usage are relatively high compared with other sub-regions, family households with dependent children are strongly represented, and there are other types of industries that are dependent upon the sustainability of the mining industry.

Group Two – Agriculture, forestry and fishing

Four sub-regions in the Northern Planning Area were defined by the main economic activity sector of agriculture¹³, forestry and fishing. These sub-regions are Carpentaria North West – Rural, Carpentaria – South Rural and Cook Shire – South Rural in the Queensland component of the Northern Planning Area, and West Arnhem – Minjilang in the Northern Territory component.

Apart from West Arnhem – Minjilang, the other sub-regions recorded, on average, only half of their populations as counted at home. This could be due to the temporary nature of some work on properties at the time of the Census (August). The Queensland sub-regions tended to have more highly mobile populations, as just over 50% of persons were located at a different address five years prior to the Census.

These four sub-regions were more male-dominated, with the highest proportion of females recorded as 43.0% in one of these sub-regions. In all these sub-regions over 68% of their total populations were in non-dependent age groups. For three of the sub-regions, between 40% and 50% of the total dependants were aged 65 years and over. Interestingly, in each of these sub-regions over a quarter of the population was not in the labour force, apart from in the Carpentaria – North West Rural sub-region.

Computer usage at home in the week prior to the Census was very low, ranging from 7.9% to 20.3% in each of these sub-regions. Internet usage, at home and/or at work and/or elsewhere was also low, ranging from 5.1% to 19.7%. Over 50% of their

¹³ Although there are other sub-regions in the Northern Planning Area that were defined geographically as being located in a rural area, they were not dominated, industry related, by agriculture, forestry and fishing employment.

populations had an individual annual income of either nil or negative, or less than \$31 200. Although at least 36% of all dwelling structures were separate houses, other structures, including caravans, cabins and houseboats, were also common.

There were some disparities between these sub-regions. The proportion of Indigenous persons ranged from 2.5 to 65.5%. Household type also varied, with the population living in a family household ranging from less than 50% to 93.5%.

The socio-economic status of persons in these sub-regions appears to be mixed. Obviously there are agricultural, forestry and fishing employment related activities, but other variables suggest that there is also a more itinerant population in these sub-regions. Issues for the National Oceans Office when dealing with these sub-regions include gaining access to the actual usual resident population (if this is the group being targeted). Other considerations are the lower educational levels, a higher than average elderly dependent population, very low rates of computer and internet use, and the ability to find people living in temporary dwelling structures.

Group Three – Indigenous communities

While the industry of government administration and defence employed the largest overall number of persons in the Northern Planning Area, the highest number and proportion of persons in this industry were generally located in sub-regions with Indigenous communities. This is because participants in the Community Development Employment Program (CDEP) are recorded as working in the government administration and defence industry. It is assumed that in this case, it is not the economic attributes that determine the demographic and social characteristics of these sub-regions, but rather the reverse.

The sub-regions in this group had many similar demographic and social attributes, particularly the high number and proportion of Indigenous persons. However, there were also differences, especially between the Northern Territory and Queensland.

Sub-group One – East Arnhem, West Arnhem and Groote Eylandt

In the Northern Territory component of the Northern Planning Area, the SLAs of West Arnhem, East Arnhem Balance and Groote Eylandt all had very similar demographic and social characteristics, that differed from other Indigenous communities. The only exceptions were the sub-region of West Arnhem – Minjilang, with diverse industries (particularly agriculture), and the mining sub-region of Alyangula in the Groote Eylandt SLA.

These sub-regions had the highest proportion of Indigenous persons in the Northern Planning Area. In most cases, over 90% of each sub-region's population was Indigenous, of which nearly 100% was Aboriginal. As shown on an earlier map (figure 11), nearly all of the sub-regions recorded over 80% of their populations speaking Australian Indigenous languages as their main language at home. Computer usage at home and all internet usage was minimal in most of these sub-regions (less than 5% of persons using a computer or internet).

In these sub-regions, the proportion of people in dependent age groups (the majority aged 0 to 14 years) was generally similar to the proportion in most of the Northern Planning Area sub-regions (on average 30%). Therefore, there were, on average, between 60% and 70% of people in non-dependent age groups. Although there was a higher proportion of non-dependent persons, these sub-regions had a high proportion of the population that was not in the labour force (not actively looking for work in the four weeks prior to the 2001 Census).

The principal type of employment was under the CDEP. Although the CDEP is an employment program aimed specifically at Indigenous persons, the high proportion employed in the CDEP could be due to the very low educational levels of the populations. Persons employed in service industries were mainly working in the education, health and community services.

There was a high proportion of family households in this group of sub-regions, with over 95% of persons living in a family household. Separate houses were the main type of dwelling structure, and rentals the main type of tenure (renting through a housing authority was minimal).

When working within and/or for the populations in these sub-regions, communication media should be targeted specifically for the local cultural and social features. If, for example, the National Oceans Office were to conduct a communication campaign covering the entire Northern Planning Area, then separate ways of communicating would need to be designed, including the use of Indigenous languages.

Sub-group Two – Torres Strait Area (excluding sub-region of Torres – Cape York Rural)

The most significant difference between the Indigenous communities in the Torres SLA sub-regions and other Indigenous communities of the Northern Planning Area is the high proportion of persons from a Torres Strait Islander origin background, or both a Torres Strait Islander and Aboriginal background (rather than an Aboriginal background).

Although all these sub-regions shared some similar socio-economic characteristics, the Torres SLA can be further sub-divided into three types of communities, based on geographical location, which have different proportions of Indigenous persons. The three locations in the Torres SLA are:

- the Cape York sub-regions (Bamaga, Injinoo, New Mapoon and Umagico)
- the sub-regions located in and surrounding Thursday Island (Thursday Island West, Thursday Island North, Thursday Island East, and Hammond and Horn Islands)
- the sub-regions of the remaining islands in the Torres Strait (Central West Islands, East Islands and Northern Islands).

In all Cape York sub-regions, Indigenous persons accounted for over 80% of the population. In the Thursday Island sub-regions, along with Hammond and Horn Islands, less than 60% of the population were Indigenous (apart from in the sub-region of Thursday Island North). In the remaining islands of the Torres Strait, at

least 82% of each sub-region's population were Indigenous. However, the total numbers of Indigenous persons were similar in all three locations.

For both the Indigenous communities in Cape York and the remaining islands of the Torres Strait, employment was highest in the government administration and defence industry. For the Thursday Island and surrounding islands sub-regions, this industry accounted for less than a quarter of employment, which was mainly in other types of industries (including construction, retail trade, accommodation, cafes and restaurants, transport, education, and health and community services). This suggests that this entire area (Thursday Island, Hammond and Horn Islands) is more of an administrative and service area, which caters to the populations in the other Torres SLA sub-regions.

The labour force status was fairly similar in all of the sub-regions in the Torres SLA (apart from Hammond and Horn Islands, and Thursday Island North) with, on average, 60% of each sub-region's population stating that they were in the labour force. In all the sub-regions in the Torres SLA, over 80% of their total populations were recorded as counted at home in the 2001 Census, and most sub-regions recorded over 90% of persons counted at home. All of the Torres SLA sub-regions (apart from Thursday Island West) had a higher than average (compared with the Northern Planning Area) number of people in dependent age groups (ranging from 34.4% to 45.7%), mostly aged between 0 and 14 years.

Family households were the most dominant type of household in all of the sub-regions, accounting for over 86% of households in each sub-region. Most household structures in the Cape York Indigenous communities, and within the Torres Strait 'remaining islands', were separate houses. On the other hand, semi-detached houses, particularly flats and units, were common in the Thursday Island sub-regions. Apart from a high proportion of housing authority rentals in the Thursday Island North sub-region (44.9%), other rental types were the most common type of tenure for private dwellings.

In all of the Torres SLA sub-regions (apart from Thursday Island North, with 46.7%), over 50% of the population aged 15 years and over had completed a junior certificate (year 10) or started and/or completed a senior certificate (year 11 or 12). Computer and internet usage was highest within the Thursday Island and Hammond and Horn Islands, maybe as a result of the more diverse industries in these sub-regions. Thursday Island East and Thursday Island West both recorded over a quarter of their populations as having used a computer at home in the week prior to the Census, and over a quarter had used the internet anywhere.

When undertaking work in these sub-regions, the main difference to consider between these communities and other Indigenous communities in the Northern Planning Area is that most of the Indigenous persons are from a Torres Strait Islander background, or from both a Torres Strait Islander and Aboriginal background, rather than just an Aboriginal background. This difference can affect various cultural issues. The other feature to consider is that the sub-regions within Thursday Island, along with the Hammond and Horn Islands sub-region, have more diverse demographic, social and economic communities than the remaining sub-regions.

Sub-group Three – All other Indigenous communities

The remaining Indigenous communities, although also relying significantly on CDEP employment, were different again from the above two sub-groups. All the sub-regions in this third sub-group are sparsely spread across the Northern Territory and Queensland. A common feature of these sub-regions is that they do not share the main characteristics of the SLA they are located in (the other sub-regions in their SLA have different industry and economic characteristics).

These 15 Indigenous communities were Aurukun – Town (Aurukun SLA); Doomadgee (Burke SLA), Kowanyama and Pormpuraaw (Carpentaria SLA); Coen, Hopevale, Lockhart River, Marpuna and Napranum (Cook Shire SLA); Borroloola, Minyeri, Ngukurr, North Townships, Robinson River (Gulf SLA); and Mornington – Rural and Mornington – Town (Mornington SLA).

The total number of Indigenous persons varied in each of these sub-regions, but accounted for over 60% of population (and 10 sub-regions had an Indigenous population of at least 80%). All recorded over 80% of their populations as being counted at home. They typically had a higher than average (compared with the Northern Planning Area) number of people in dependent age groups, with the most dependants aged between 0 and 14 years.

For all of these sub-regions, the government administration and defence industry was the largest industry of employment, with the proportion employed in this industry varying from 38.8% in Borroloola (Gulf SLA) to 88.0% in Napranum (Cook SLA). Apart from Pormpuraaw, Hopevale, Lockhart River and Robinson River, over 30% of each sub-region's population aged 15 years and over was not in the labour force, with Ngukurr recording the highest proportion (50.3%).

As in most Indigenous communities in the Northern Planning Area, the most common household type was the family household, and over 80% of each sub-region's population is part of a family household. However, the main type of dwelling structure varied between each sub-region. While most sub-regions recorded over 50% of their dwelling structures as being a separate house, some sub-regions recorded over 10% as caravans, cabins and houseboats.

Private dwellings being rented through an 'other' type of tenure (ie, not from a housing authority) were the most common form of tenure across the sub-regions; however, renting a housing authority home was the most common tenure type in the sub-region of Coen. Other tenure types (i.e. not owned, being purchased or rented) were also represented in most sub-regions, especially in the Mornington sub-regions.

Educational levels, in terms of year of schooling completed, varied across these sub-regions. All recorded less than 10% of their populations as having used a computer in the week prior to the Census, and less than 10% had used the internet anywhere, apart from Pormpuraaw (10.2%).

Although these communities were similar in terms of the proportion of Indigenous people, the general age of the population and labour force status, there were also distinct differences between them. These differences included the proportion of persons employed in the government administration and defence industry, educational levels, and the language spoken at home. Any future work in these sub-regions would need to consider these differences. For example, communication materials may need to be designed specifically for individual Indigenous communities.

Group Four – Diversified economic and social characteristics

The remaining sub-regions are not dominated by one main economic base, but have most to all of the industry sectors. These sub-regions can be further sub-classified, based on geographical location, into two sub-groups: (1) coastal sub-regions, located in or near a coastal area, and (2) rural sub-regions, located in a large rural area, but not dominated by employment in the agricultural, forestry and fishing industry (although there is some employment in this industry).

The coastal sub-regions include Burketown (Burke SLA), Karumba (Carpentaria SLA), and the Central/East Coast, Cooktown and South East Coast sub-regions (Cook SLA). The sub-region of Normanton (Carpentaria SLA), while not located right on the coastline, has very similar characteristics to these coastal sub-regions.

The three rural sub-regions are Aurukun – Rural (Aurukun SLA), Cook Shire – North Rural (Cook SLA) and Torres – Cape York Rural (Torres SLA). Although employment is not dominated by the agriculture, forestry and fishing industry sector, their demographic and social characteristics are similar to sub-regions where employment is based on this industry sector.

The populations in these sub-regions ranged from 221 persons counted in the Burketown sub-region to 1572 persons in the Cooktown sub-region. In the coastal sub-regions, the proportion of persons counted at home varied, with the sub-region of Karumba only recording 39.8% of persons at home. The number of persons in the rural sub-regions ranged from 33 persons in Aurukun – Rural to 533 in Cook Shire – North Rural. All three rural sub-regions recorded less than 40% of their population counted at home. In the coastal sub-regions, the proportion of Indigenous persons ranged from 2.1% in Carpentaria – Karumba to 54.9% in Carpentaria – Normanton. The rural areas also varied in their proportion of Indigenous persons.

For most coastal sub-regions, over 30% of persons aged 15 years and over were not in the labour force (58.5% in Carpentaria – Karumba). All the coastal sub-regions, and Carpentaria – Normanton, recorded over 30% of their populations within a dependent age group, apart from the sub-region of Cook Shire – Central/East Coast. Carpentaria – Karumba had a higher proportion of dependent persons aged 65 years and over than persons under 15 years.

Educational levels were relatively high across all of the sub-regions, with all (apart from Aurukun – Rural) recording over 50% of their populations completing a junior (year 10) or senior (years 11 or 12) certificate. Compared with other sub-regions of the Northern Planning Area, computer and internet usage was also relatively high in

the coastal sub-regions, and similar to those of a mining community. Other socio-economic variables such as household, dwelling structure and tenure type were similar to the other sub-regions across the Northern Planning Area.

The only common features of the sub-regions in this group are that they have diverse industries, and they are either located on or near the coast, or are large rural areas. Many of their socio-economic attributes were different (in some cases, not substantially different). For work being undertaken in these sub-regions, these different characteristics need to be further understood.

Note on the quality of Indigenous data

The general and pervasive problem of Indigenous statistics is that of identification of Indigenous status. There is no obligation for anyone to identify as Indigenous, as there is no set of physical or other criteria that determines whether someone is Indigenous.

In situations where there may be any doubt, based on appearance, that a person is Indigenous, an official responsible for filling out a form may be reluctant to ask whether a person is Indigenous.

As a consequence, Indigenous persons are undercounted to a moderate to large degree in most data collections (eg, crime, courts, health, education). The degree of under-identification is generally largest in major urban areas, and least in rural and remote regions.

On the other hand, it is widely considered that the Census provides a reasonably accurate count of the number of Indigenous persons in an area. Some of the arguments supporting this assumption are that Indigenous status in the Census is entirely based on self-identification (at least for adults) with no threat of retribution or penalty if one's Indigenous status is or is not revealed. A very high proportion of Australians (about 97%) are directly counted in the Census, and categories of persons that are routinely undercounted are well understood by the ABS and are adjusted for. However, research done by Queensland Health, and later by OESR and the Department of Aboriginal and Torres Strait Islander Policy, in partnership with the Centre for Aboriginal Economic Policy Research, and the Queensland Centre for Population Research at the University of Queensland, has demonstrated that many Indigenous persons living in rural and remote Indigenous communities are not counted in the Census. The degree of undercount (as opposed to under-identification) appears to vary from small (a few per cent) to considerable (about 30%).

The principal reasons for the undercount may vary from place to place but they commonly include travel between communities, reluctance to register members of a household above accommodation limits set for public housing, and a culturally-based lack of understanding or support for the Census process.

Ironically, identification rates in remote communities appear to be very good. Everyone can be assumed to be Indigenous and they are almost always identified as such in administrative collections. Furthermore, they can be presumed to be Indigenous based on their place of usual residence. For many communities, an examination of school rolls, admissions to hospital, and lists of those receiving government benefits provides evidence of a Census undercount. These other databases have their own and different uncertainties, but intelligent synthesis of such multiple sources of information can provide a fairly accurate estimate of the size of the undercount. This work has been carried out for Queensland Indigenous communities in the Northern Planning Area. It is likely that Arnhem Land communities in the Northern Territory have very similar characteristics.

An excellent study of the Census enumeration process (in three Indigenous communities in the Northern Territory in 2001) was carried out by the Centre for Aboriginal Economic Policy Research at Australian National University (Martin et al, 2002). The study revealed how differences in the cultural and language background of community residents lead to even basic demographic information collected by the Census being of very doubtful validity. Problems were identified with respect to data on education, income, occupation and employment status. For example, the vast majority of employed persons are employed under the Community Development Employment Program (CDEP) funded by the Federal government. Work (or not working) is strongly associated with whether an individual has been paid, rather than what they might have done for that pay or how long they have to work for it.

(a) Statistical Local Areas defined by 2003 ASGC. As of 30 June 2003, SLA boundaries changed in Queensland to reflect geographic locations of Indigenous Councils. For Aboriginal Councils and Indigenous Councils, the ABS did not provide new estimates for June 2003; the estimates are assumed to be unchanged from June 2002.

(b) Average annual growth rate.

AC = Aboriginal Council IC = Island Council

P = preliminary

Table 29. Number of families by family type, Northern Planning Area, 2001
(occupied private dwellings)

	Family type – number of families –				Total families(a)
	Couple family with children	Couple family without children	One parent family	Other family	
Total	4732	2304	2226	242	9504

(a) Total count represents families in an occupied private dwelling only.

Table 30. Families by family type, Northern Planning Area, 2001
(occupied private dwellings) (percentage of total)

	Family type – per cent of families –				Total families(a)
	Couple family with children	Couple family without children	One parent family	Other family	
Total	49.8	24.2	23.4	2.5	100.0

(a) Total count represents families in an occupied private dwelling only.

Table 31. Number of persons by family type, Northern Planning Area, 2001
(occupied private dwellings, excludes family members temporarily absent on Census night)

	Family type – number of persons –				Total persons within a family(a)
	Couple family with children	Couple family without children	One parent family	Other family	
Total	23002	4800	8330	710	36842

(a) Total count represents persons within a family in an occupied private dwelling only.

Table 32. Persons by family type, Northern Planning Area, 2001 (occupied private dwellings, excludes family members temporarily absent on Census night) (percentage of total)

	Family type – per cent of persons –				Total persons within a family(a)
	Couple family with children	Couple family without children	One parent family	Other family	
Total	62.4	13.0	22.6	1.9	100.0

(a) Total count represents persons within a family in an occupied private dwelling only.

Table 33. Number of persons in specific household types, Northern Planning Area, 2001 (all persons in occupied private dwellings)

Household type – number of persons –								
	Family households				Non-family households			
	Couple family with children	Couple family without children	One parent family	Total family h'holds (a)	Lone person h'holds	Group member h'holds	Other (b)	Total persons (c)
Total	23002	4800	8330	36842	1749	557	434	39582

(a) Includes all family households including the 'other family category'; excludes family members who were temporarily absent on Census night.

(b) 'Other' is the number of persons who are unrelated individuals living in a family household.

(c) Total count represents persons in occupied private dwellings only; excludes visitors from within Australia and overseas visitors.

Table 34. Persons in specific household types, Northern Planning Area, 2001 (all persons in occupied private dwellings) (percentage of total)

Household type – per cent of persons –								
	Family households				Non-family households			
	Couple family with children	Couple family without children	One parent family	Total family h'holds (a)	Lone person h'holds	Group member h'holds	Other (b)	Total persons (c)
Total	58.1	12.1	21.0	93.1	4.4	1.4	1.1	100.0

(a) Includes all family households including the 'other family category'; excludes family members who were temporarily absent on Census night.

(b) 'Other' is the number of persons who are unrelated individuals living in a family household.

(c) Total count represents persons in occupied private dwellings only; excludes visitors from within Australia and overseas visitors.

Table 35. Relationship in household, Northern Planning Area, 2001 (persons in occupied private dwellings)

Relationship in household	Total persons(a)	per cent of total population (a)
	– number –	– per cent –
Husband or wife in registered marriage	9821	22.0
Partner in de facto marriage	3951	8.8
Lone parent	2119	4.7
Child under 15	13050	29.2
Dependent student (15 to 24 years)	706	1.6
Non-dependent child	3016	6.7
Other related individual	4148	9.3
Unrelated individual living in family household	406	0.9
Group household member	547	1.2
Lone person	1788	4.0
Visitor (from within Australia)	5175	11.6
TOTAL	44727	100.0

(a) Total count represents all persons in an occupied private dwelling in the Northern Planning Area on the night of the 2001 Census (excludes overseas visitors).

Table 36. Number of families (a) in specific family types by sub-region, Northern Planning Area, 2001 (occupied private dwellings)

Sub-region	Family type – number of families –			Total family h'holds (b)
	Couple family with children	Couple family without children	One parent family

TOTAL	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

(a) Excludes family members temporarily absent on Census night.

(b) Includes all family households, including the 'other family category'; excludes family members who were temporarily absent on Census night.

(c) 'Other' is the number of persons who are unrelated individuals living in a family household.

(d) Total count represents persons in occupied private dwellings only; excludes visitors from within Australia and overseas visitors.

Table 42. Number of dwellings by dwelling structure and tenure type, Northern Planning Area, 2001 (all private dwellings)

Dwelling structure	Tenure type – number of dwellings –					Unoccupied private dwellings	Total (d)
	Occupied private dwellings						
	Fully owned	Being purchased (a)	Rented - housing authority	Rented - other (b)	Other tenure type (c)		
Separate house	762	298	386	5356	806	-	8249
Semi-detached, row or terrace house, townhouse, etc.	20	6	32	187	53	-	331

Other (f)	1015	78	0	239	383	-	2287
Not stated	37	0	7	66	32	-	315
Unoccupied	-	-	-	-	-	1664	1664
TOTAL	1850	393	581	6311	1355	1664	13672

(a) Includes the tenure type, 'being purchased under a rent/buy scheme'.

(b) Excludes rental private dwellings where the rental tenure type was not stated.

(c) Includes the tenure types 'being occupied rent free', 'being occupied under a life tenure scheme' and other tenure types.

(d) Total count represents all occupied private dwellings and unoccupied private dwellings. In relation to tenure type the total count represents the dwellings being rented where the tenure type was not stated and represents overall tenure type not stated (approximately 2197 dwellings were not reported in a tenure category above).

(e) Includes a flat, unit or apartment attached to a house.

(f) Includes caravans, cabins, houseboats, improvised homes, tent, sleepers out and a house or flat attached to a shop or office.

TOTAL	40.2	51.0	95.0	5.0	54.5	37.6	100.0

(a) Full-time is defined as having worked 35 hours or more in all jobs in the week prior to Census night.

(b) Total employed includes persons who did not state their hours worked. (c) Equals the unemployment rate.

(d) Total labour force has been converted to participation rates instead of equalling 100.0 (sum of employment and unemployment). The accuracy of the labour force participation rates will vary according to the proportion of people who did not state their labour force status. (e) Total includes those who did not state their labour force status.

Table 69. Persons by labour force status by sub-region, Northern Planning Area, 2001
(all persons aged 15 years and over) (percentage of total Northern Planning Area labour force status)

Sub-region	Labour force status – per cent –

(a) Includes households where one or more persons did not state their income range.

Glossary

ABS: Australian Bureau of Statistics.

Age left school (ALSP): Age left school classifies the age at which a person left primary or secondary school and is a proxy indicator of the educational level attained by people. Categories are also provided for people still at school, and those who did not go to school. The age of leaving school is used instead of level of schooling because of differences in, and changes to, educational systems. This is an important variable for planning education facilities and assessing the educational level of the population.

Australian and New Zealand Standard Industrial Classification (ANZSIC): The Australian and New Zealand Standard Industrial Classification (ASGC) was developed by the ABS for the collection and dissemination of industry statistics. It is a hierarchically structured classification with a number of levels of detail to satisfy different statistical purposes.

Australian Standard Geographical Classification (ASGC): The Australian Standard Geographical Classification (ASGC) was developed by the ABS for the collection and dissemination of geographic statistics. It is a hierarchically structured classification with a number of spatial units to satisfy different statistical purposes.

Collection District (CD): The census Collection District (CD) is the smallest geographic area defined in the Australian Standard Geographical Classification (ASGC). A CD is represented by a unique seven digit code. For the 2001 Census there is an average of about 225 dwellings in each CD. In rural areas the number of dwellings per CD declines as population densities decrease.

Community Development Employment Program (CDEP): The Community Development Employment Program scheme was developed in 1976 as a response to remote Aboriginal communities' requests for local employment to be created, with a particular focus on community development. The CDEP enables members of Aboriginal or Torres Strait Islander communities to exchange unemployment benefits for opportunities to undertake work and training in activities which are managed by a local Aboriginal or Torres Strait Islander community organisation.

In 1985 CDEP was expanded to include Aboriginal and Torres Strait Islander communities living in rural and urban areas. Previously, CDEP was funded and supported by the Aboriginal and Torres Strait Islander Commission (ATSIC), who allocated grants to participating community organisations that employ members of the local community. With the abolition of ATSIC, this role was taken over by mainstream government agencies from 1 July 2004.

CDEP participants are included in the employed category of the Labour Force Status/Status in Employment (LFSE) classification, and as a separate category in the Industry Sector (GNIP) classification.

Estimated Resident Population: The Estimated Resident Population (ERP) is the official ABS estimate of the Australian population. The ERP is based on results of the Population Census and is compiled as at 30 June of each Census year and updated quarterly between censuses. These intercensal estimates of the resident population are revised each time a population census is taken.

Family type (FMTF): Families are classified in term of the relationships that exist between a single family reference person and each other member of that family. The Family type (FMTF) variable distinguishes between different types of families based on the presence or absence of couple relationships or other blood relationships, in that order of preference.

FMTF is derived from people enumerated in the household who usually reside there, and who share a familial relationship. Partners and dependent children usually present but temporarily absent are also included in this derivation. Boarders and other non-family members are excluded.

Group household: The ABS defines a group household as a household consisting of two or more unrelated people where all persons are aged 15 years or over. There are no reported couple relationships, parent-child relationships or other blood relationships in these households.

For the 1991 Census, at least one member of a household had to be over the age of 15 for the household to be coded as a group household.

For the 1996 Census, an unrelated child (e.g. boarder) under the age of 15 who lived in a household with one or more usual residents, was coded as forming a parent-child relationship within that household. These households become family households, not group households.

Household income (HIND): This variable is the sum of the personal incomes of each resident present in the household. If any person aged 15 and over is temporarily absent, or if any person has income not stated, Household income (HIND) is set to 'Partial income stated' and the condition indicated by the variable Household income derivation indicator (HIDD).

If there are persons temporarily absent, or a negative/no income has been stated for persons present on census night, these persons do not contribute to the household income that is derived for that household.

Income (INCP): This variable records the income level of people aged 15 years and over. People are asked to state their usual gross weekly income, which is the income before tax, superannuation, health insurance, or other deductions are made.

Gross income includes family allowance, family allowance supplement, pensions, unemployment benefits, student allowances, maintenance (child support), superannuation, wages, salary, overtime, dividends, rents received,

interest received, business or farm income (less operation expenses) and worker's compensation received.

People are not asked to state their exact income, only to indicate the range into which their income falls.

Income from some sources may be negative. As income from most sources is reported before deduction of expenses incurred in the earning of the income, these incomes are always a positive figure. However, business income from own unincorporated enterprise and income from rental property is collected net of expenses incurred in the raising of this income. Therefore, income derived from business or from rental properties may be a negative value. The total income may therefore be a negative value. To record this information, a 'negative income' category has been included for the 2001 Census.

Indigenous locations (ILOCS): Indigenous locations (ILOCS) are single CDs or aggregates of CDs which have a population of at least 80 Indigenous persons. ILOCS aggregate to Indigenous areas (IAREs). ILOCS cover the whole of Australia.

Indigenous status (INGP): The origin question on the census form asks whether each person is of Aboriginal and/or Torres Strait Islander origin. The purpose of the question is to provide data about both groups of Australia's Indigenous people.

Torres Strait Islanders are the descendants of the Indigenous people of the Torres Strait, between the tip of Cape York and Papua New Guinea.

Labour force: For 2001 Census purposes, the labour force includes people aged 15 years and over who:

- work for payment or profit, or as an unpaid helper in a family business, during the week prior to census night;
- have a job from which they are on leave or otherwise temporarily absent;
- are on strike or stood down temporarily; or
- do not have a job but are actively looking for work and available to start work.

The following people are classified as being in the labour force:

- employed people (i.e. the first three groups above); and
- unemployed (i.e. the last group above).

People aged 15 years and over who are not employed or unemployed are classified as not in the labour force. This includes many students, and people who are retired, pensioners and people engaged solely in home duties.

Language (LANP): This variable identifies any language other than English, spoken at home. The classification contains the languages and groups of languages most likely to be used in Australia.

Lone person household: A person who makes provision for his/her own food and other essentials in living, without combining with any other person to form part of a multi-person household. He/she may live in a dwelling on his/her own or shares a dwelling with another individual or family.

OESR: Office of Economic and Statistical Research.

Tenure Type: Tenure Type describes whether households are renting, purchasing or own the dwelling in which they were enumerated on census night, or whether they occupy them under another arrangement. In 1991, the variable was called Nature of Occupancy. Thus, the number of categories available in 1996 has increased and now includes being purchased under a rent/buy scheme, being occupied rent free and being occupied under a life tenure scheme (which can be considered similar to being owned).

Statistical Local Area (SLA): The Statistical Local Area (SLA) is an Australian Standard Geographical Classification (ASGC) defined area which consists of one or more Collection Districts (CDs). SLAs are local government areas (LGAs), or parts thereof. Where there is no incorporated body of local government, SLAs are defined to cover the unincorporated areas. SLAs cover, in aggregate, the whole of Australia without gaps or overlaps.

Urban Centre/Locality (UC/L): The UC/L Structure of the ASGC is used for the production of standard statistical outputs from the Population Censuses. An Urban Centre is generally defined as a population cluster of 1000 or more people. A Locality is generally defined as a population cluster of between 200 and 999 people. People living in Urban Centres are classified as urban for statistical purposes while those in Localities are classified as rural (i.e. non-urban). Each Urban Centre and/or Locality (UC/L) is bounded and composed of one or more whole Collection Districts (CDs). UC/Ls are revised at each Census so from one census to the next both the population and the area of a UC/L may change.

The UC/L Structure is separate from the Main Structure of the ASGC because the boundaries do not generally coincide with SLAs and the higher level spatial units in the Main Structure.

Usual residence: The 2001 Census form contains three questions on usual residence. Question 7 asked where each person usually lived on census night, Question 8 asked where each person usually lived one year ago and Question 9 asked where each person usually lived five years ago.

Usual residence is defined in the notes provided with Question 7 as '... that address at which the person has lived or intends to live for a total of 6 months or more in 2001', 'for people who now have no usual address, write no usual address' and 'for boarders at boarding school or college, give the address of the school or college'. This instruction was not given in censuses prior to 1986 and often these people incorrectly reported their family home as their place of usual residence.
