

A preliminary ecological
risk assessment of the
impact of tropical fire ants
(*Solenopsis geminata*) on
colonies of seabirds at
Ashmore Reef

Bellio MG, Bayliss P, Williams AJ,
van Dam R, Fox GJ & Moulden JH

Australian Government

**Department of the Environment and Water Resources
Supervising Scientist**

It is SSD policy for reports in the SSR series to be reviewed as part of the publications process. This Supervising Scientist Report has been formally refereed by two external independent experts.

Maria Grazia Bellio – Environmental Research Institute of the Supervising Scientist & National Centre for Tropical Wetland Research, Darwin NT (current address: International Water Management Institute, PO Box 2075, Colombo, Sri Lanka)

Dr Peter Bayliss – Environmental Research Institute of the Supervising Scientist, GPO Box 461, Darwin NT 0801, Australia

Angus J Williams – Australian Quarantine and Inspection Service (AQIS), PO Box 350, Broome WA 6725, Australia

Dr Rick van Dam – Environmental Research Institute of the Supervising Scientist, GPO Box 461, Darwin NT 0801, Australia

Gary J Fox – Environmental Research Institute of the Supervising Scientist, GPO Box 461, Darwin NT 0801, Australia

JH Moulden – Western Australia Department of Agriculture, PO Box 19, Kununurra WA 6743, Australia

This report should be cited as follows:

Contents

1 Introduction	1
1.1 Background	1
1.2 Project aims	2
1.3 Approach	2
1.3.1 Risk assessment framework	2
THE RISK ASSESSMENT	5
2 Identification of the problem: information on the stressor and the environment	6
2.1 Ashmore Reef – brief overview of habitats, flora, fauna, historical and cultural values	6
2.1.1 Geographical location and oceanographic conditions	6
2.1.2 Historical and cultural values	7
2.1.3 Ecological values – marine ecosystems	7
2.1.4 Ecological values – terrestrial ecosystems	7
2.2 Tropical fire ant overview of natural history: reproductive strategy, growth development and survival of all life stages (eggs, larvae, adults)	11
2.2.1 Description	12
2.2.2 Food	12
2.2.3 Reproduction and colonies	12
2.2.4 Life cycle stages	12
2.3 History of tropical fire ant invasion at Ashmore Reef	13
3 Effect characterisation: evaluation of data and information on potential impacts	15
3.1 Effects of invasive alien species (IAS)	15
3.2 Island populations vulnerability and the effect of multiple pressures	17
3.3 Potential impact of the tropical fire ant on native species	18
3.3.1 Impact on ant communities and other invertebrates	18
3.3.2 Impact on birds and reptiles	19
3.4 Overview of status and conservation of breeding seabirds species at Ashmore Reef	19
3.4.1 Wedge-tailed shearwater (<i>Puffinus pacificus</i>)	20

3.4.2 Masked booby (<i>Sula dactylatra bedouti</i>)	20
3.4.3 Brown booby (<i>Sula leucogaster</i>)	21
3.4.4 Red-footed booby (<i>Sula sula</i>)	22
3.4.5 Great frigatebird (<i>Fregata minor</i>)	23
3.4.6 Lesser frigatebird (<i>Fregata ariel</i>)	24
3.4.7 White-tailed tropicbird (<i>Phaeton lepturus lepturus</i>)	25
3.4.8 Red-tailed tropicbird (<i>Phaeton rubricauda</i>)	26
3.4.9 Bridled tern (<i>Sterna anaethetus</i>)	26
3.4.10 Crested tern (<i>Sterna bergii</i>)	27
3.4.11 Lesser crested tern (<i>Sterna bengalensis</i>)	28
3.4.12 Roseate tern (<i>Sterna dougalli</i>)	28
3.4.13 Common noddy (<i>Anous stolidus</i>)	29
3.4.14 Black noddy (<i>Anous minutus</i>)	30
3.4.15 Lesser noddy (<i>Anous tenuirostris melanops</i>)	31
3.4.16 Sooty tern (<i>Sterna fuscata</i>)	31
3.4.17 Eastern reef egret (<i>Egretta sacra</i>)	33
3.5 Current status of breeding seabird at Ashmore	34
3.5.1 Methods	34
3.5.2 Results	37
4 Exposure characterisation: identification of the extent of the problem	44
4.1 Tropical fire ant habitat preferences and reasons for preference	44
4.2 Current distribution and density of tropical fire ants on Ashmore Reef	44
4.2.1 Methods	44
4.2.2 Results	46
5 Risk characterisation	53
5.1 Damage – pest density relationships in pest management	53
5.2 Number of dead seabird chicks and the abundance of tropical fire ants	53
5.2.1 Working hypotheses and model assumptions	53
5.2.2 Methods of analysis	55
5.2.3 Results: common noddy on East and Middle islands	57

6 Discussion of risk quantification and recommendation for management of tropical fire ants at Ashmore Reef	64
6.1 Results summary	64
6.2 Management strategy	66
6.3 Eradication	66
6.3.1 Failure of treatment:	66
6.3.2 Re-infestation	67
6.4 Control to a target density	67
6.4.1 Ant monitoring methods	68
6.4.2 Data and methods to survey seabird nesting recruitment for future monitoring	68
6.5 No action	69
6.6 Conclusions	69
References	71
Appendices	79
Appendix 1 GPS coordinates of location of lesser frigatebird colonies at East Island	80
Appendix 2 GPS coordinates of location of lesser frigatebird (FB) and crested tern (CT) colonies, red-footed booby (RFB) – brown morph (b) and white morph (w) – and eastern reef egrets nest on Middle Island	81
Appendix 3 Coordinates of location of eastern reef egret nests on Middle Island	82
Appendix 4 Counts of seabirds (adults – otherwise specified juvenile) on West, East and Middle Island at the time of the survey in November 2004	84
Appendix 5 Opportunistic counts of shorebirds at West, Middle and East Islands, Ashmore Reef, November 2004	85
Appendix 6 GPS coordinates of points delimiting the transects along which fresh turtle tracks were counted on West Island on the 17 th of November 2004	86
Appendix 7 List of GPS way-point readings (using WGS 84) for each island	87
Appendix 8 Ant abundance and numbers caught in traps	88
Appendix 9 Middle Island ant nest distribution around bait stations	96

Tables

Table 1 Non indigenous terrestrial plants and animals established at Ashmore Reef Islands	16
Table 2 Some of the ecological and socio-economic factors that can influence the risk of introduction, establishment and spread of IAS in island ecosystems	17
Table 3 Coordinates of red-tailed tropicbird nests found at West Island on 9 November 2004	37
Table 4 Summary of the number of dead common noddy chicks found in the sample grids of East and Middle islands	55
Table 5 Summary of the multiple regression relationship between the density of all dead common noddy chicks, with the density index of tropical fire ants and percentage vegetation cover, across East and Middle islands	58
Table 6 MANCOVA of the density of dead common noddy chicks in each age/size class with vegetation cover and tropical fire ant density index and island	59
Table 7 Summary of multiple regression analyses between the density of dead common noddy chicks with vegetation cover and tropical fire ant density index, for each size class on each island	60
Table 8 Summary of multiple regression analyses between the density of dead common noddy chicks in vulnerable age/size Classes 1 and 2 combined, with vegetation cover and tropical fire ant density index, separately for both islands and combined, respectively	61
Table 9 The frequency distribution of dead common noddy chicks by two vulnerability classes and by island, and associated estimates of mortality rate	63
Table 10 Most likely pathway of invasion of tropical fire ants to Ashmore Reef	67
Table A8.1 Ant numbers caught in the pitfall traps at West Island	88
Table A8.2 Ant abundance in the three bait stations at West Island	89
Table A8.3 Ant numbers caught in the pitfall traps at Middle Island	91
Table A8.4 Ant abundance in the three bait stations at Middle Island	92
Table A8.5 Ant numbers caught in the pit traps at East Island	94
Table A8.6 Ant abundance in the three bait stations at East Island	95
