Supervising Scientist for the Alligator Rivers Region
PO Box 387
Bondi Junction NSW 2022 Australia

This Technical Memorandum was prepared by Chris Devonport
GIS Laboratory Northern Territory University

The Supervising Scientist for the Alligator Rivers Region manages the Alligator Rivers Region Research Institute, which conducts, coordinates and integrates research relating to the effects on the environment of mining in the Alligator Rivers Region. Research findings of projects carried out under contract to the Supervising Scientist or undertaken by the Supervising Scientist's own staff may be published in the Research Report or Technical Memorandum series. Views expressed by authors do not necessarily reflect the views and policies of the Supervising Scientist, the Commonwealth Government or any collaborating organisation.

This work is copyright. Apart from any use as permitted under the Copyright Act 1968, no part may be reproduced by any process without prior written permission from the Australian Government Publishing Service. Requests and inquiries concerning reproduction and rights should be addressed to the Manager, Commonwealth Information Services, Australian Government Publishing Service, GPO Box 84, ACT 2601.

A SELECTED GIS BIBLIOGRAPHY

OCTOBER 1992

Compiled by

C. DEVONPORT

GIS Laboratory, Northern Territory University

PO Box 40146, Casuarina, NT 0811

1 INTRODUCTION

Geographic Information Systems (GIS) are used in many environmental spatial analysis and modelling situations. Technical and applications-oriented workers from many fields (e.g. geography, ecology, geology, hydrology, etc.) are interested in the use of GIS and as a result published material is spread across the literature of many disciplines. There is only one GIS-specific journal (International Journal for Geographic Information Systems) and many papers are in the form of conference proceedings. Consequently, it is often difficult to identify and locate bibliographic information on specific aspects of GIS.

This bibliography has been compiled as part of a collaborative research agreement between the Northern Territory University and the Supervising Scientist for the Alligator Rivers Region. It contains over 2,000 references to GIS literature which have been selected from books, journals and conference proceedings published from 1987 to the present. The selection is biased to environmental and resource management topics (cf. urban, sociological and facilities management) and specifically aims to provide a reference point for GIS literature related to environmental risk/hazard assessment associated with activities such as mining. References are in alphabetical order by author and the following sources account for the majority:

- International Journal of Geographic Information Systems
- Photogrammetric Engineering & Remote Sensing Journal
- GIS/LIS Conference Proceedings
- AURISA/URPIS Conference Proceedings
- EGIS Conference Proceedings
- URISA Conference Proceedings

AARNET users can access the bibliography in text format via anonymous ftp from darwin.ntu.edu.au. The data can be provided in other formats or alternative means on request (phone 089 466 711, fax 089 410 460 or email chris@ironwood.ntu.edu.au). While compiling this information other bibliographic efforts have been identified. Currently, the most significant of these is that of the National Centre for Geographical Information and Analysis (NCGIA) who have prepared a comprehensive bibliography for 1991 GIS publications and are presently compiling 1992 information.

2 ACKNOWLEDGEMENTS

Thanks to Susan Ringrose for encouragement and support, Heather Moorcroft for advice, Yvette Pattinson for fast, accurate data entry and all those who have helped to gather this information particularly Jonathan Dobson in Melbourne and Jan Ritsema in the Netherlands. Preparation of this bibliography was partially funded through a Northern Territory University Faculty of Science Postgraduate Studies grant.
