# Machinery Cleaning Guide - Forklift

**Biosecurity**

Publication series

April 2016

## DISCLAIMER

The information provided in this guide merely aims to assist machinery importers meeting the import conditions. This guide is not exhaustive and the Department of Agriculture and Water Resources makes no warranties or representations with respect to the accuracy or completeness of that information and will bear no liability with respect to that information. Importers must satisfy all biosecurity concerns and comply with biosecurity conditions applicable at the time of entry. The Commonwealth through the department is not liable for any costs arising from or associated with decisions of importers to import based on conditions presented here which are not current at the time of importation. It is the importer's responsibility to verify the accuracy and completeness of the information at the time of importation.

# Cleaning guidelines

The most common type of contamination found on forklifts is contaminated grease. Grease itself is not a biosecurity concern but after time it will attract biosecurity risk material such as soil, seeds and plant material. Once grease becomes contaminated it must be removed to meet the Department of Agriculture and Water Resources standards.
