

## Failing Food Report – April 2018

This report details food that was found to fail under the Imported Food Inspection Scheme during the month. For full data on activity and compliance under the Scheme refer to the six monthly [Imported Food Inspection Data](#) reports.

### Risk/Advisory food tests (targeted monitoring of food for compliance to safety standards)

The Department of Agriculture and Water Resources (the department) targets and monitors food determined to pose a high or medium risk to public health. [Risk food](#) is targeted at the rate of 100 per cent until a history of food safety compliance is established. When an emerging human health and safety hazard is identified in food, the department may temporarily increase monitoring and testing. This is referred to as advisory food.

The following table details where noncompliant food was detected. Advisory food is marked with an asterisk in the table.

The noncompliant food was not distributed for sale in Australia. It was destroyed by the importer or re-exported to the country of origin under department supervision. Future consignments continue to be targeted at 100 per cent until a history of compliance is established. More information on risk food and the tests applied under the IFIS can be found on the [Tests applied to risk food](#) webpages.

## Random monitoring of food for compliance

The department operates a five per cent random surveillance scheme to monitor a range of food imported into Australia for compliance to some standards in the Australia New Zealand Food Standards Code. These tests are applied as part of a rolling program of surveillance on the Australian food supply.

The following table details where results were found to be noncompliant with food standards. Future consignments of this food are subject to an increased rate of testing until a history of compliance is achieved.

More information on surveillance food and the tests applied can be found on the [Tests applied to surveillance](#) food webpage.
