

## Failing Food Report – July 2019

This report details food that was found to fail under the Imported Food Inspection Scheme during the month. For full data on activity and compliance under the Scheme refer to the annual [Imported Food Inspection Data](#) reports.

### Risk food tests (targeted monitoring of food for compliance to safety standards)

The Department of Agriculture (the department) targets and monitors food determined to pose a high or medium risk to public health. [Risk food](#) is targeted at the rate of 100 per cent until a history of compliance is established.

The following table details where noncompliant food was detected.

The noncompliant food was not distributed for sale in Australia. It was destroyed by the importer or re-exported to the country of origin under department supervision. More information on risk food and the tests applied under the IFIS can be found on the [Tests applied to risk food](#) webpages.

### Random monitoring of food for compliance

The department operates a five per cent random surveillance scheme to monitor a range of food imported into Australia for compliance to some standards in the Australia New Zealand Food Standards Code. These tests are applied as part of a rolling program of surveillance food and are therefore subject to change.

More information on surveillance food and the tests applied can be found on the [Tests applied to surveillance](#) food webpage.

The following table details where results were found to be noncompliant with food standards. Future consignments of this food are subject to an increased rate of testing until a history of compliance is achieved.
