

## The RFA and Ecologically Sustainable Forest Management

Ecologically Sustainable Forest Management (ESFM) is the management of forest on all land tenures to maintain the overall capacity of forests to provide goods, protect biodiversity, and protect the full suite of forest values at the regional level. One of the key objectives of each RFA is to ensure that forests on and off reserves are managed sustainably.

As shown in the following table, Victoria's systems and processes for ESFM involve a range of measures including:

- legislation and policies;
- planning;
- implementation;
- information, monitoring and evaluation; and
- review and improvement.

The RFA ESFM provisions include:

- development and monitoring of sustainability indicators
- publishing future reports of audits of compliance with the Code of Forest Practices for Timber Production
- implementing a continuing quality assurance program within three years
- publishing of regional prescriptions for timber production, the Central Highlands Forest Management Plan and management plans for National and State Parks by the end of 1998
- the development of Statewide guidelines for the Management of Cultural Heritage Values in Forests, Parks and Reserves
- encouraging private forest owners to comply with the Code of Forest Practice for Timber Production
- research priorities and priorities for the management of vegetation communities and endangered species
- Victoria reaffirming its commitment to review pricing and allocation policies for government owned commercial forestry operations.
