The figures shown in this table are based on modelled information mapped at a scale of 1:100,000 derived during the pre-1750 analysis of vegetation types in the North East, and are therefore only approximate. A vegetation mosaic consists of discrete floristic entities (EVCs) which were unable to be distinguished in the mapping due to the scale used (that is 100,000). A vegetation complex occurs where floristic entities are unable to be distinguished in the area but are known to exist discretely elsewhere. In the North East RFA area complexes were mapped as part of the pre-1750 mapping exercise on private land where sufficient information was available to accurately map the boundaries between them. The percentages of each EVC shown in the various land tenures comprise proportions of their pre-1750 extent. The areas on private land formerly occupied by each EVC is included in the category 'Non-treed Area' under 'Current Extent'. Code Prescription refers to areas protected under the Code of Forest Practices for Timber Production prescriptions for exclusion of timber harvesting from streamside buffers and slopes of 30 degrees or more. E – Endangered, R – Rare, V – Vulnerable in accordance with the national reserve criteria (JANIS 1997). Special Management Zone is abbreviated to SMZ and General Management Zone to GMZ
